Why Choose Lee Spring?

Selection

Lee Spring offers 25,000+ products in stock, plus custom capabilities to meet your specifications. From the Bantam™ Mini Series up to the HEFTY™ Die Series, Lee Spring stocks a spring that fits most applications. Not finding what you need in the stock line, Lee Spring can custom manufacture springs to meet your exact specifications.

In Stock

Lee Spring stocks millions of springs all ready to ship today. An extensive inventory of Compression, Extension, Torsion, Belleville, MIL-SPEC and specialty springs are on hand.

Global Flexibility

Lee Spring partners with your business to find solutions that meet your geographic requirements wherever your business takes you in the world. Lee Spring has locations located around the world ready to assist. Develop prototypes with a Lee Spring Engineer in one part of the world and reduce long-run shipping costs by producing parts close to where you need them in another part of the world. This level of global flexibility and selection is just another reason to work with Lee Spring on your next project.

Custom Made to Your Specifications

Lee Spring offers extensive custom capabilities and engineering support from design through production. Lee Spring also offers an extensive selection of custom material and finish options.

Experience and Support

Since 1918, Lee Spring has been manufacturing, engineering, and designing springs, formed metal parts and related products for a wide variety of industries. Lee Spring's extensive experience in spring design and mechanical engineering will complement your design team.

More Value

Free Standard Ground Shipping on Stock Springs in the Continental United States on orders of $40 or more.

Free Plating on all Music Wire Stock Springs.

Free Grinding on all Standard Stock Compression Springs.

Free Passivation on 302, 316 & 17-7 Stainless Steel Stock Springs.

Certificate of Compliance on all Stock Springs and Custom Springs.

Guaranteed RoHS Compliance on all Stock Springs.

SPRING KITS

Spring Kits
Compression Series, Extension Series, Instrument Series 6

COMPRESSION SPRINGS

Bantam™ Mini Series INCH & METRIC
Free Length: .039"- .625" • Ends Not Ground 7

Instrument Series INCH & METRIC
Free Length: .039"– 2.087" • Ends Square, Not Ground 15

Lite Pressure™ Series
Free Length: .313"– 6" • Ends Square, Not Ground 35

Standard Series INCH & METRIC
Free Length: .173"– 11.417" • Squared and Ground Ends 61

Heavy Duty Series
Free Length: .875"– 6" • Squared and Ground Ends 151

High Pressure Series
Free Length: .250"– 4" • Squared and Ground Ends 159

DIN-Plus Series 169
DIN2098 Part 2: Stainless Steel • Free Length: .039" – 2.063"
• Ends Square, Not Ground
DIN2098 Part 1: Spring Steel • Free Length: .173" – 39.961"
• Squared and Ground Ends

HEFTY™ DIE SPRINGS

HEFTY™ Die Springs
Fit in Hole: .375" - 2" • Free Length: 1" - 12" 185

REDUX™ WAVE SPRINGS

REDUX™ Wave Springs INCH & METRIC
Outside Diameter: .210"– 1.707" • Free Height: .060" – 2" 207

BELLEVILLE WASHERS

Belleville Washers
Outside Diameter: .188"– 3.75" • Free Height: .014" – .281" 225

EXTENSION SPRINGS

Instrument Series INCH & METRIC
Outside Diameter: .063" – .157" • Free Length: .250" – 1.181" 235

Standard Series INCH & METRIC
Outside Diameter: .098" – 2" • Free Length: .311" – 11.417" 243

MATERIAL CODE: **M** = Music Wire **S** = Type 302* Stainless **S316** = Type 316 Stainless **E** = Elgiloy® or equivalent cobalt alloy
*Type 302 may be substituted with Type 304 at Lee Spring's discretion. **S** = Type 17-7 PH for LW, LWM & LHP Series

MATERIAL – METAL ALLOYS

- Music Wire per ASTM A228, DIN 17223, BS 5216, EN 10270-1, IS 4454-1, or JIS-G-3522
- Stainless Steel Type 301/302/304 OR Type 316 PER ASTM A313, A666, AMS 5906, DIN 17224, BS 2056, EN 10270-3, IS 4454-4, or JIS-G-4314, 4305
- Type 17-7PH per AMS 5678, AMS 5529, ASTM A313, JIS-G-4314; or JIS-G-4303
- Oil Tempered MB or Chrome Silicon per ASTM A229, A401, DIN 17223, BS 2803, IS 4454-2, or EN10270-2
- Elgiloy per AMS 5833 (Chemical Only) or equivalent cobalt alloy at Lee Spring's discretion
- Beryllium Copper per ASTM B197
- Material specification may vary or be subject to change
- Wire size is approximate and may be substituted at Lee Spring's discretion to meet other design specifications

STRESS RELIEF

All springs are stress relieved to remove coiling strains.

FINISH

All Lee Music Wire and Oil Tempered Standard and Heavy Duty Stock Springs are furnished zinc plated in accordance with specification ASTM B633 Class Fe/Zn 5 Type III (.0002" thick with clear chromate) and baked for hydrogen embrittlement relief.

All Lee Music Wire Instrument Compression, Extension and Torsion Springs are furnished zinc plated or based on using pre-coated tin or pre-coated zinc wire at Lee Spring's discretion without supplemental zinc plating.

Lee Spring Stock Springs with the exception of Cadmium Plated MIL-SPEC Springs, are manufactured RoHS compliant and do not use Cadmium, Lead, Mercury, Hexavalent Chromium, Polybrominated biphenyl (PBB) or Polybrominated Diphenyl Ether (PBDE) in plating or any other processes.

Lee Spring products are exempt from the OSHA Hazardous Communication Standard.

All Lee Spring 302 Stainless Steel Standard, Heavy Duty and Instrument Stock Springs are furnished passivated in accordance with specification ASTM A967 (supercedes QQ-P-35). Additionally, Lee Spring 316 Stainless Steel Stock Springs are passivated plus ultrasonically cleaned.

DIRECTION OF WIND

Left or Right (Lee Spring option)

ENDS– COMPRESSION SPRINGS

Standard, Heavy Duty, High Pressure Series, and DIN-PLUS Part 1

- Squared and ground (squareness within 3°).

Bantam Mini, Instrument, Lite Pressure Series, and DIN-PLUS Part 2

- Squared, Not Ground

ENDS– EXTENSION SPRINGS

Instrument and Standard Series

- Loops are full diameter at random position, except those noted to meet DIN 2097.
- Loop openings of approximately one wire diameter

NOTES

1. COMPRESSION SPRINGS — To find the load at any working length, when free length and rate are given, use the formula:
   P = R x F
   where P is the load in lbs.; R is the rate in lbs. per inch; F is the deflection from free length.
   Example: (Lee Stock Spring Catalog #LC 032C 08M) — Given a free length of .750" and a rate of 22 pounds per inch, find the load at .500" working length. P = 22 x (.750-.500) = 22 x .250 = 5.5lbs.
2. EXTENSION SPRINGS — To find the load at any working length, when the free length, rate and initial tension are given, use the formula:
   P= (R x F) + I.T.
   where P is the load in lbs.; R is the rate in lbs. per inch; F is the deflection from free length; I.T. is the initial tension.
   Example: (Lee Stock Spring Catalog #LE 031C 01M) — Given a free length of 1", a rate of 6.9 pounds per inch, and .7 pounds initial tension, find the load at 1.500".
   P = [6.9 x (1.500-1.000)] + .7 = (6.9 x .500) + .7 = 3.45 + .7 = 4.15 lbs.

If you cannot find the Stock Spring you need in our print or on-line catalogs, use the Custom Spring Specifications Forms on pages 356-380, submit your specification at www.leespring.com or contact our Engineering Department at (888) 777-4647, prompt 3.

Conditions of Sale

- **TERMS:** Net 30 days from date of invoice to all accredited customers. All purchases are subject to Lee Spring's Standard Terms and Conditions of Sale, as described below and in our invoice. No other terms and conditions apply to any purchase order. All prices are in U.S. Dollars. We accept American Express (Amex), Master Card (MC), and Visa.
- **CERTIFICATES OF COMPLIANCE:** Lee Spring will supply Certificates of Compliance at no charge with every order.
- **RAW MATERIAL CERTIFICATION**: Material Traceability (chemical and/or physical) Certifications are available only on Special Orders at an additional charge.
- **SHIPMENTS:** Free Standard Ground Shipping on Stock Springs within the continental United States.
- **SHORTAGES:** All claims for shortages must be filed within 15 days from customer's receipt of shipment.
- **RETURNS AND RESTOCKING:** All returns require a Return Material Authorization (RMA) number. Returns may incur restocking charges. Please call Lee Spring Customer Service toll free at 888 - 777- 4647 to obtain an RMA number prior to returning any merchandise.
- **PRICING:** All Prices are subject to change without notice. Prices are based on Lee Spring's standard packaging.
- **ORDER ACCEPTANCE:** Orders for 100 pieces or under will only be accepted with a delivery date less than 90 days from the purchase order date.

BANTAM™ Mini Compression Springs

Miniature Compression Springs with Big Performance

Bantam™ Mini Compression Springs are Lee Spring's unique line of miniature springs. These Stock products are offered in wire sizes .0040", .0045", .0050" and .0055". The Inch sizes (prefix CB) include selections to work inside hole diameters 1/32", 3/64" and 1/16" and in a range of free lengths from .050" up to .625". The Metric sizes (prefix CBM) include selections to work inside of hole diameters 1mm, 1.5mm and 1.8mm in a range of free lengths starting at 1mm up to 12mm. The ends are closed and squared, not ground. In order to meet and maximize the performance needs of a potentially diverse range of applications, Lee Spring selected Elgiloy® as the alloy for Stock BANTAM™ Mini Springs.

Elgiloy® is a Cobalt-Nickel alloy known for its high strength, e.g. 10% stronger than Type 316 Stainless Steel. It exhibits superior resistance in most corrosive environments including acetic acid, ammonium chloride, citric acid, sodium chloride and sodium sulfite. This material performs well in temperatures up to 850° F. Elgiloy® is non-magnetic.

BANTAM™ Mini Compression Springs have useful applications in various industries, including:

- Medical devices
- Pharmaceutical delivery devices
- Petro-chemical processes
- Aerospace
- Marine industries
- Locks and security devices
- Hardware
- Firearms
- Lighting and electrical control
- Communication devices
- Testing and measurement
- Automotive
- Precision Instruments

...and many more

Lee Spring can manufacture custom mini springs to your specifications. Contact us today!

BANTAM™ Mini Compression Springs

Guide to using tables

Lee Stock Number:
Lee Spring Part Number

To Work In Hole Diameter:
Suggested minimum hole size if needed for spring containment.

Approx. Load at Solid Height:
The load or force required to bring all coils into contact.

Spring Rate:
Change in load or force per unit of deflection.

Price Group:
Reference for price list. **See fold-out section at rear of book.**

Outside Diameter:
Spring outer diameter, parts listed in ascending order.

Wire Diameter:
In ascending order of size, within each group of outside diameters.

Free Length:
The overall height of the spring in the unloaded position.

Solid Height:
Length when fully compressed.

Additional Information

- The smallest compression spring series that Lee Spring offers in a stock line.
- Bantam series wire diameter's starting at just 0.0040" (0.10mm), which just slightly thicker than a human hair.
- Custom designs in Elgiloy® are available.
- Spring Rate and Load at Solid Height are pre-calculated for Elgiloy®. Elgiloy® is a trademark of Elgiloy Ltd. Partnership.

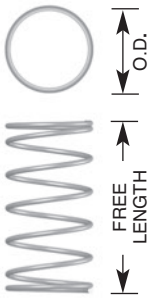

Note: Elgiloy® may be substituted with equivalent cobalt alloy wire at Lee Spring's discretion.

How to Determine Price

1. Select the spring you want by LEE STOCK NUMBER.
2. Read across to the last column PRICE GROUP to obtain the price code: when applicable, select the price code that corresponds to the material type required.
3. Refer to the PRICE GROUP in the appropriate pricing chart by spring type located in the back of this catalog for pricing up to 199 pieces of an item.
4. Prices subject to change without notice.

FREE SHIPPING AVAILABLE
See Price List in back of catalog for details.

Compression Springs – Instrument Series

Precision Springs for Precision Products

The Lee Spring Instrument Series includes a wide range of size and rate combinations in a smaller, highly precise spring design. Selections are sorted in ascending order to mating hole/bore diameter sizes. Instrument Compression Springs are available in both inch and metric series.

Inch Series springs are available in Music Wire, Type 302 Stainless Steel and Type 316 Stainless Steel. Metric Series springs are available in Music Wire and Type 302 Stainless Steel. The Music Wire springs are made from coated wire or provided with a plating finish for light corrosion resistance. The Type 302 Stainless Steel springs are passivated, while Type 316 Stainless Steel springs are passivated and ultrasonically cleaned.

Lee Spring Instrument Compression Springs feature squared ends. A squared end, also called a closed end, is made by reducing the coil pitch of the ends to zero. Squareness influences how a force produced by the spring can be transferred to adjacent parts.

Lee Spring can manufacture custom compression springs to your specifications. Contact us today!

Compression Springs – Instrument Series

Guide to using tables

Lee Stock Number:
Lee Spring Part Number, add suffix M for Music Wire, S for Stainless Steel or S316 for Type 316 Stainless Steel.

To Work In Hole Diameter:
Suggested minimum hole size if needed for spring containment.

Approx. Load at Solid Height:
The load or force required to bring all coils into contact.

Spring Rate:
Change in load or force per unit of deflection.

Price Group:
Reference for price list. **See fold-out section at rear of book.**

Outside Diameter:
Spring outer diameter, parts listed in ascending order.

Wire Diameter:
In ascending order of size, within each group of outside diameters.

Free Length:
The overall height of the spring in the unloaded position.

Solid Height:
Length when fully compressed.

Additional Information

- Load at Solid Height figures are provided for reference only. During the manufacturing process all material and engineering tolerances may result in the number of coils being adjusted to maintain the correct spring rate and therefore affect solid height.
- It is general good practice to avoid compressing springs to their solid height in order to achieve longer life. A guide rod is recommended to prevent buckling of long springs.
- To figure the load at any working length based on nominal free length and spring rate use the formula:

  $P = R \times F$

  where P is the load in lbs.; R is the spring rate in lbs per inch; F is the deflection in inches (or free length minus final spring length).

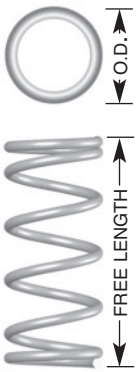

How to Determine Price

1. Select the spring you want by LEE STOCK NUMBER.
2. Read across to the last column PRICE GROUP to obtain the price code: when applicable, select the price code that corresponds to the material type required.
3. Refer to the PRICE GROUP in the appropriate pricing chart by spring type located in the back of this catalog for pricing up to 199 pieces of an item.
4. Prices subject to change without notice.

FREE SHIPPING AVAILABLE
See Price List in back of catalog for details.

SPECIAL INSTRUCTIONS FOR COMPRESSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 or Type 316 Stainless, multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

COMPRESSION SPRINGS: INSTRUMENT SERIES (INCH)

ENDS NOT GROUND • *Music Wire (Plated**), 302 Stainless Steel* (Passivated), or 316 Stainless Steel (Passivated Ultrasonically Cleaned)*

SPECIAL INSTRUCTIONS FOR COMPRESSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 or Type 316 Stainless, multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

COMPRESSION SPRINGS: INSTRUMENT SERIES (INCH)

ENDS NOT GROUND • *Music Wire (Plated**), 302 Stainless Steel* (Passivated), or 316 Stainless Steel (Passivated Ultrasonically Cleaned)*

SPECIAL INSTRUCTIONS FOR COMPRESSION SERIES

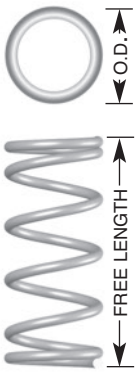

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 or Type 316 Stainless, multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.
† Indicates DIN Compression Springs meeting the design parameters outlined in Standard DIN 2098.

COMPRESSION SPRINGS: INSTRUMENT SERIES (METRIC)

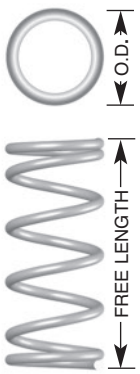

ENDS NOT GROUND • **Music Wire (Plated**) or Stainless Steel (Passivated)**

SPECIAL INSTRUCTIONS FOR COMPRESSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 or Type 316 Stainless, multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.
† Indicates DIN Compression Springs meeting the design parameters outlined in Standard DIN 2098.

ENDS NOT GROUND • **Music Wire (Plated**) or Stainless Steel (Passivated)**

SPECIAL INSTRUCTIONS FOR COMPRESSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 or Type 316 Stainless, multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.
† Indicates DIN Compression Springs meeting the design parameters outlined in Standard DIN 2098.

With over 25,000 stock springs, extensive custom capabilities and over 100 years of expertise, Lee Spring continues to respond to yesterday's needs, today's demands and tomorrow's technology. Lee Spring leads the industry with innovative products like LeeP™ Plastic Composite Springs, BANTAM™ Mini Springs, Lite Pressure™ Springs and now High Pressure Springs.

Whether you need 1 spring or 10 million springs, Lee Spring's World-Class Service and comprehensive website make finding the right spring easy. Call or email Lee Spring today to learn more.

Lite Pressure™ Compression Series

When Light Pressure is the Right Pressure

Lite Pressure™ Compression Springs have useful applications in various industries, including:

- Medical devices
- Firearms
- Pharmaceutical delivery devices
- Lighting and electrical control
- Petro-chemical processes
- Communication devices
- Aerospace
- Testing and measurement
- Marine industries
- Automotive
- Locks and security devices
- Precision Instruments
- Hardware

...and many more

Lite Pressure™ Compression Springs are ideal when a relatively low spring rate or workable load is needed in dimensions not normally available in conventional compression spring rate and size combinations.

The term “Lite Pressure” refers to the design performance of these springs, generally used where relatively low forces are required for a given diameter.

Lite Pressure™ Series Springs are made of passivated and ultrasonically cleaned Type 316 Stainless Steel to meet requirements for various applications that require improved corrosion resistance, enhanced cleanliness, and moderately elevated temperatures.

WHY "PRESSURE"?

Pressure is described as a force which is exerted over a surface area. In regards to compression springs, the pressure exerted as the result of a specific deflection can be more technically described as force over a flat surface with a circular perimeter (the Nominal Hole in which the spring is being used). The term "Lite Pressure™" is used to describe a series of springs designed to be utilized where relatively low forces are required for a given diameter.

HOW PRESSURE RATING FOR LP SERIES WOULD BE USED:

The pressure rating assigned to each item of the Lite Pressure™ series is a selection parameter to assist in meeting qualitative requirements or quantitative requirements. Each series is offered in increments within ranges from 1 to 5 psi, 1.5 to 5.5 psi or 5 to 15 psi pressure ratings.

APPLICATIONS:

Lite Pressure™ Series Springs are ideal for many fluid power applications such as relief valves, check valves or pistons. Other applications could include motor brushes, contacts, displays, syringes, toys, dispensers and many more.

Lee Spring can manufacture custom lite pressure springs to your specifications. Contact us today!

Lite Pressure™ Compression Springs

Guide to using tables

Lee Stock Number: Lee Spring Part Number, add suffix S316 for Type 316 Stainless Steel.

To Work In Hole Diameter: Suggested minimum hole size if needed for spring containment.

Pressure @ 80% Deflection: The nominal pressure occurring at 80% of total available deflection.

Approx. Load at Solid Height: The load or force required to bring all coils into contact.

Spring Rate: Change in load or force per unit of deflection.

Price Group: Reference for price list. **See fold-out section at rear of book.**

LP 010A 01													0.313					1.58	N

Outside Diameter: Spring outer diameter, parts listed in ascending order.

Work Over Rod: Suggested maximum rod size if needed to guide the inside of the spring.

Wire Diameter: In ascending order of size, within each group of outside diameters.

Free Length: The overall height of the spring in the unloaded position.

Solid Height: Length when fully compressed.

Additional Information

Pressure Calculation Example

Catalog spring LP 014E 05 S316 has the following characteristics:

Nominal Hole:	0.375 inch
Free Length:	1.000 inch
Solid Height:	0.143 inch
Spring Rate:	0.161 lbs/inch

- The maximum recommended pressure for this spring will occur when the spring is at 80% of maximum available deflection (it is not generally recommended to use a compression spring all the way down to solid height).
- The maximum available deflection is the difference between the Free Length (1.000) and the Solid Height (0.143) or 1.000 – 0.143 = 0.857 inch.
- 80% of that would be 0.857 x 80% = 0.686 inch.
- The calculated load at this deflection would be the deflection (0.686) times the Spring Rate (0.161) or 0.686 inch x 0.161 lbs/inch = 0.110 lbs.
- The surface area over the Nominal Hole diameter (0.375) would be pi (π) times the diameter squared divided by four or pi (π) x $(0.375)^2 / 4 = 0.110$ in^2.
- The resultant pressure would then be determined by dividing the calculated load by the surface area or 0.110 lbs / 0.110 in^2 = 1 lb/in^2 (psi).

Material

- Type 316 Stainless Steel

Finish

- Passivated per ASTM A967
- Ultrasonically cleaned

Tolerances on Spring Rate: ± 10%

How to Determine Price

1. Select the spring you want by LEE STOCK NUMBER.
2. Read across to the last column PRICE GROUP to obtain the price code: when applicable, select the price code that corresponds to the material type required.
3. Refer to the PRICE GROUP in the appropriate pricing chart by spring type located in the back of this catalog for pricing up to 199 pieces of an item.
4. Prices subject to change without notice.

Standard Compression Springs

Selection to Match Your Needs

The Lee Spring Standard Compression Spring line includes a wide range of size and rate combinations. Selections are sorted in ascending order to mating hole/bore diameter sizes. Standard Compression Springs are available in both standard and metric series.

Standard Series springs are available in Music Wire, Type 302 Stainless Steel and Type 316 Stainless Steel. Metric Series springs are available in Music Wire and Type 302 Stainless Steel. The Music Wire springs are provided with a plating finish for light corrosion resistance. The Type 302 Stainless Steel springs are passivated, while Type 316 Stainless Steel springs are passivated and ultrasonically cleaned.

Lee Spring Standard Compression Springs feature squared and ground ends. A squared end, also called a closed end, is made by reducing the coil pitch of the ends to zero. Squareness influences how a force produced by the spring can be transferred to adjacent parts. The ground ends provide flat bearing surfaces and additional stability.

Squared and ground ends are particularly useful in applications in which:

1) high-duty springs are specified;
2) unusually close tolerances on load or rate are needed;
3) solid height must be minimized;
4) accurate seating and uniform bearing pressures are required and;
5) a tendency towards buckling must be reduced.

Lee Spring can manufacture custom compression springs to your specifications. Contact us today!

Compression Springs

Guide to using tables

Lee Stock Number:
Lee Spring Part Number, add suffix M for Music Wire, S for Stainless Steel or S316 for Type 316 Stainless Steel.

To Work In Hole Diameter:
Suggested minimum hole size if needed for spring containment.

Approx. Load at Solid Height:
The load or force required to bring all coils into contact.

Spring Rate:
Change in load or force per unit of deflection.

Price Group:
Reference for price list. **See fold-out section at rear of book.**

Outside Diameter:
Spring outer diameter, parts listed in ascending order.

Wire Diameter:
In ascending order of size, within each group of outside diameters.

Free Length:
The overall height of the spring in the unloaded position.

Solid Height:
Length when fully compressed.

Additional Information

- Load at Solid Height, Solid Height and Number of coils are all given as approximate figures. During the manufacturing process all material and engineering tolerances may result in the number of coils being adjusted to maintain the correct spring rate.
- It is general good practice to avoid compressing springs to their solid height in order to achieve longer life.
- To find the load at any working length, when free length and rate are given, use the formula:
  $P = R \times F$
  where P is the load in lbs.; R is the rate in lbs per inch; F is the deflection from free length.

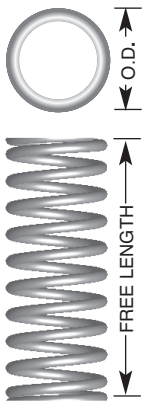

How to Determine Price

1. Select the spring you want by LEE STOCK NUMBER.
2. Read across to the last column PRICE GROUP to obtain the price code: when applicable, select the price code that corresponds to the material type required.
3. Refer to the PRICE GROUP in the appropriate pricing chart by spring type located in the back of this catalog for pricing up to 199 pieces of an item.
4. Prices subject to change without notice.

FREE SHIPPING AVAILABLE
See Price List in back of catalog for details.

SPECIAL INSTRUCTIONS FOR COMPRESSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 or Type 316 Stainless, multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

COMPRESSION SPRINGS: STANDARD SERIES (INCH)

SPECIAL INSTRUCTIONS FOR COMPRESSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 or Type 316 Stainless, multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

COMPRESSION SPRINGS: STANDARD SERIES (INCH)

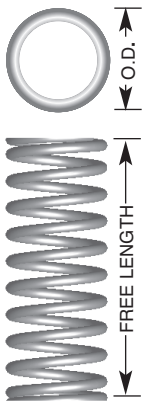

ENDS ARE GROUND • ***Music Wire (Plated), 302 Stainless Steel* (Passivated), or 316 Stainless Steel (Passivated Ultrasonically Cleaned)***

SPECIAL INSTRUCTIONS FOR COMPRESSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 or Type 316 Stainless, multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

COMPRESSION SPRINGS: STANDARD SERIES (INCH)

ENDS ARE GROUND • ***Music Wire (Plated), 302 Stainless Steel* (Passivated), or 316 Stainless Steel (Passivated Ultrasonically Cleaned)***

SPECIAL INSTRUCTIONS FOR COMPRESSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 or Type 316 Stainless, multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

COMPRESSION SPRINGS: STANDARD SERIES (INCH)

ENDS ARE GROUND • ***Music Wire (Plated), 302 Stainless Steel* (Passivated), or 316 Stainless Steel (Passivated Ultrasonically Cleaned)***

SPECIAL INSTRUCTIONS FOR COMPRESSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.
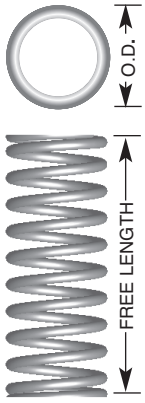

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 or Type 316 Stainless, multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

COMPRESSION SPRINGS: STANDARD SERIES (INCH)

ENDS ARE GROUND • ***Music Wire (Plated), 302 Stainless Steel* (Passivated), or 316 Stainless Steel (Passivated Ultrasonically Cleaned)***

SPECIAL INSTRUCTIONS FOR COMPRESSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.
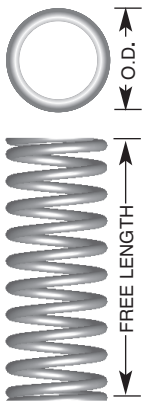

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 or Type 316 Stainless, multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

COMPRESSION SPRINGS: STANDARD SERIES (INCH)

ENDS ARE GROUND • ***Music Wire (Plated), 302 Stainless Steel* (Passivated), or 316 Stainless Steel (Passivated Ultrasonically Cleaned)***

SPECIAL INSTRUCTIONS FOR COMPRESSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 or Type 316 Stainless, multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

COMPRESSION SPRINGS: STANDARD SERIES (INCH)

ENDS ARE GROUND • **Music Wire (Plated), 302 Stainless Steel* (Passivated), or 316 Stainless Steel (Passivated Ultrasonically Cleaned)**

SPECIAL INSTRUCTIONS FOR COMPRESSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.
† Indicates DIN Compression Springs meeting the design parameters outlined in Standard DIN 2098.

SPECIAL INSTRUCTIONS FOR COMPRESSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.
† Indicates DIN Compression Springs meeting the design parameters outlined in Standard DIN 2098.

COMPRESSION SPRINGS: STANDARD SERIES (METRIC)

SPECIAL INSTRUCTIONS FOR COMPRESSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.
† Indicates DIN Compression Springs meeting the design parameters outlined in Standard DIN 2098.

SPECIAL INSTRUCTIONS FOR COMPRESSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.
† Indicates DIN Compression Springs meeting the design parameters outlined in Standard DIN 2098.

ENDS ARE GROUND • **Music Wire (Plated) or Stainless Steel (Passivated)**

SPECIAL INSTRUCTIONS FOR COMPRESSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.
† Indicates DIN Compression Springs meeting the design parameters outlined in Standard DIN 2098.

THE ONLY NON-METALLIC NON-CORRODING NON-CONTAMINATING SPRING.

REVOLUTIONARY LeeP™ PLASTIC COMPOSITE SPRINGS.

At last! Compression springs that combine the strength of metal with the special attributes of high-performance thermoplastics. LeeP™ Plastic Composite Springs feature patented designs (US Patent No. 8,939,438 B2) molded in Ultem* resins. This ground-breaking line meets the needs of applications such as medical, food-processing, marine, and electronics where non-corroding, high temperature resistant, non-conductive, inert materials are preferred. LeeP springs are stocked in a variety of standard sizes, each in easy-to-identify color-coded strengths. ***Call or email us today to learn more.***

Compression Springs – Heavy Duty Series

Durable Springs Manufactured to Perform

The Lee Spring Heavy Duty Series of compression springs includes a range of large size and high spring rate combinations. Selections are sorted in ascending order to mating hole/bore diameter sizes.

Heavy Duty Series springs are available in Music Wire or Oil Tempered MB and Type 302 Stainless Steel. Springs in this series are pre-set to prevent length loss in operation and shotpeened for added fatigue resistance. The Music Wire/Oil Tempered MB springs are provided with a zinc plating finish for light corrosion resistance. The Type 302 Stainless Steel springs are passivated.

Lee Spring Heavy Duty Series springs feature squared and ground ends. A squared end, also called a closed end, is made by reducing the coil pitch of the ends to zero. Squareness influences how a force produced by the spring can be transferred to adjacent parts. The ground ends provide flat bearing surfaces and additional stability.

Squared and ground ends are particularly useful in applications in which 1) high-duty springs are specified, 2) unusually close tolerances on load or rate are needed, 3) solid height must be minimized, 4) accurate seating and uniform bearing pressures are required and 5) a tendency towards buckling must be reduced.

Lee Spring can manufacture custom heavy duty compression springs to your specifications. Contact us today!

Compression Springs – Heavy Duty Series

Guide to using tables

Lee Stock Number:
Lee Spring Part Number, add suffix M for Music Wire or S for Stainless Steel.

To Work In Hole Diameter:
Suggested minimum hole size if needed for spring containment.

Approx. Load at Solid Height:
The load or force required to bring all coils into contact.

Spring Rate:
Change in load or force per unit of deflection.

Price Group:
Reference for price list. **See fold-out section at rear of book.**

Outside Diameter:
Spring outer diameter, parts listed in ascending order.

Wire Diameter:
In ascending order of size, within each group of outside diameters.

Free Length:
The overall height of the spring in the unloaded position.

Solid Height:
Length when fully compressed.

Additional Information

- Load at Solid Height figures are provided for reference only. During the manufacturing process all material and engineering tolerances may result in the number of coils being adjusted to maintain the correct spring rate and therefore affect solid height.
- It is general good practice to avoid compressing springs to their solid height in order to achieve longer life. A guide rod is recommended to prevent buckling of long springs.
- To figure the load at any working length based on nominal free length and spring rate use the formula:

  $P = R \times F$

  where P is the load in lbs.; R is the spring rate in lbs per inch; F is the deflection in inches (or free length minus final spring length.

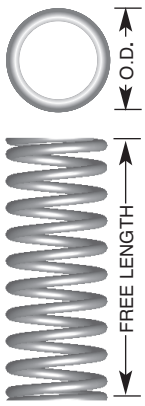

How to Determine Price

1. Select the spring you want by LEE STOCK NUMBER.
2. Read across to the last column PRICE GROUP to obtain the price code: when applicable, select the price code that corresponds to the material type required.
3. Refer to the PRICE GROUP in the appropriate pricing chart by spring type located in the back of this catalog for pricing up to 199 pieces of an item.
4. Prices subject to change without notice.

FREE SHIPPING AVAILABLE
See Price List in back of catalog for details.

SPECIAL INSTRUCTIONS FOR HEAVY DUTY COMPRESSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 Stainless, multiply figures shown by (.870).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

COMPRESSION SPRINGS: HEAVY DUTY SERIES (INCH)

ENDS ARE GROUND • **Music Wire/Oil Tempered MB (Shotpeened, Plated) or Stainless Steel (Shotpeened, Passivated)**

SPECIAL INSTRUCTIONS FOR HEAVY DUTY COMPRESSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Load at Solid Hgt. are for Music Wire. For Type 302 Stainless, multiply figures shown by (.870).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

ENDS ARE GROUND • **Music Wire/Oil Tempered MB (Shotpeened, Plated) or Stainless Steel (Shotpeened, Passivated)**

High Pressure Compression Series

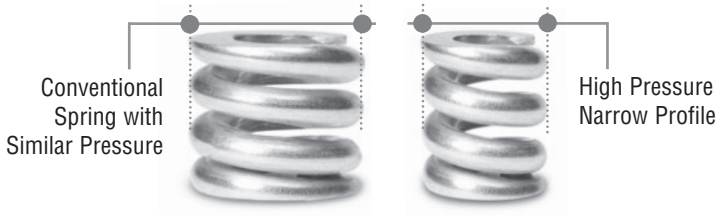

High Spring Rates in a Narrow Profile

High Pressure Compression Springs are a series of slender low index compression springs with relatively high pressure ratings compared to standard compression springs.

Designed to fit in small holes from 1/8" to 2" and preset to solid height. The High Pressure Series is made of 17-7 Stainless Steel with precipitation hardening heat treatment, shot peened and passivated.

Same Pressure in a Narrow Profile

High Load Capacities and Rated to Four Pressures

How Pressure Rating For LHP Series Would Be Used

The pressure rating assigned to each item of the High Pressure Series is a selection parameter to assist in meeting qualitative requirements or quantitative requirements.

Applications

LHP series springs are ideal for high working loads in short deflections, for example safety relief valves and check valves in fluid power applications, ball plungers, electrical contacts, switches, vise clamps, quick change tools, toys, and production line fittings or accessories.

Lee Spring can manufacture custom high pressure compression springs to your specifications. Contact us today!

High Pressure Compression Series

Guide to using tables

Lee Stock Number: Lee Spring Part Number.

To Work in Hole Diameter: Suggested minimum hole size if needed for spring containment.

Wire Diameter: In ascending order of size, within each group of outside diameters.

Approx. Load at Solid Height: The load or force required to bring all coils into contact.

Spring Rate: Change in load or force per unit of deflection.

Price Group: Reference for price list. **See fold-out section at rear of book.**

LHP 022A 01S																			T

Outside Diameter: Spring outer diameter, parts listed in ascending order.

To Work Over Rod Diameter: Suggested maximum rod size if needed to guide the inside of the spring.

Pressure @ 80% Deflection: The nominal pressure occurring at 80% of total available deflection.

Free Length: The overall height of a spring in the unloaded position.

Solid Height: Length when fully compressed.

RELATIONSHIP TO FLUID PRESSURE

The pressure ratings used for High Pressure Series springs have no ***direct*** relationship with "pressure" as traditionally used in the fluid power industry, although indirectly the pressure ratings are conceptually equivalent.

Fluid pressure would be the result of a spring force acting over the specific area exposed to the fluid and would depend on other application components such as the valve face or the piston head.

PRESSURE CALCULATION EXAMPLE

Catalog spring **LHP 072E 04S** has the following characteristics:

Nominal Hole: 0.375 inch
Free Length: 1.000 inch
Solid Height: 0.673 inch
Spring Rate: 210.75 lbs/inch

- The maximum recommended pressure for this spring will occur when the spring is at **80%** of ***maximum available deflection*** (it is not generally recommended to use a compression spring all the way down to solid height).
- The ***maximum available deflection*** is the difference between the Free Length (1.000) and the Solid Height (0.673) or 1.000 – 0.673 = 0.327 inch.
- 80% of that would be 0.327 x 80% = 0.262 inch.
- The calculated load at this deflection would be the deflection (0.262) times the Spring Rate (210.75) or 0.262 inch x 210.75 lbs/inch = 55.217 lbs.
- The surface area over the Nominal Hole diameter (0.375) would be pi (π) times the diameter squared divided by four or pi (π) x $(0.375)^2 / 4 = 0.1104$ in^2.
- The resultant pressure would then be determined by dividing the calculated load by the surface area or 55.217 lbs / 0.1104 in^2 = 500 lb/in^2 (psi).

MATERIAL

- 17-7 PH Stainless Steel

FINISH

- Passivated per ASTM A967

Tolerances on Spring Rate: ± 10%

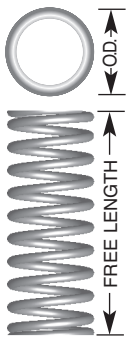

Tolerances on Outside Diameter: See Compression Diameters Table on page 5.

How to Determine Price

1. Select the spring you want by LEE STOCK NUMBER.
2. Read across to the last column PRICE GROUP to obtain the price code: when applicable, select the price code that corresponds to the material type required.
3. Refer to the PRICE GROUP in the appropriate pricing chart by spring type located in the back of this catalog for pricing up to 199 pieces of an item.
4. Prices subject to change without notice.

SPECIAL INSTRUCTIONS FOR HIGH PRESSURE COMPRESSION SERIES

PRICING: See Inside Back Cover for up to 199 pcs. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Approx. Load at Solid Hgt. are pre-calculated for Type 17-7 PH Stainless Steel.

COMPRESSION SPRINGS: HIGH PRESSURE SERIES (INCH)

ENDS ARE GROUND • **Type 17-7 PH Stainless Steel (Shotpeened, Passivated)**

SPECIAL INSTRUCTIONS FOR HIGH PRESSURE COMPRESSION SERIES

PRICING: See Inside Back Cover for up to 199 pcs. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate and Approx. Load at Solid Hgt. are pre-calculated for Type 17-7 PH Stainless Steel.

With over 25,000 stock springs, extensive custom capabilities and over 100 years of expertise, Lee Spring continues to respond to yesterday's needs, today's demands and tomorrow's technology. Lee Spring leads the industry with innovative products like LeeP™ Plastic Composite Springs, BANTAM™ Mini Springs, Lite Pressure™ Springs and now High Pressure Springs.

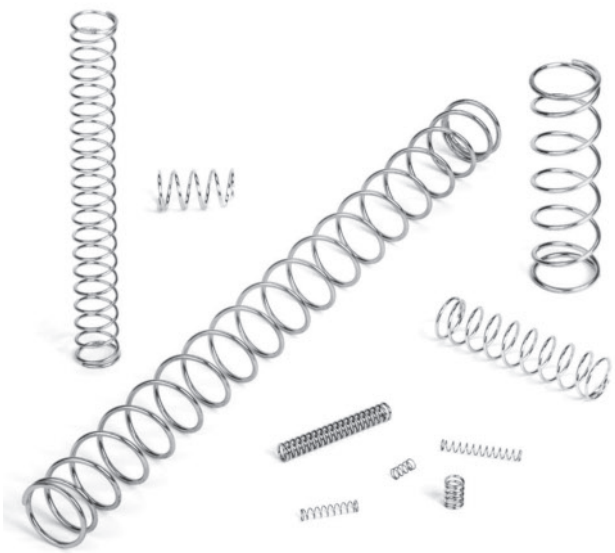

Whether you need 1 spring or 10 million springs, Lee Spring's World-Class Service and comprehensive website make finding the right spring easy. Call or email Lee Spring today to learn more.

DIN-Plus Compression Springs

Standard DIN Sizes Plus Improved Corrosion Resistance

DIN+Plus
Improved Corrosion Resistance

The Lee Spring DIN-Plus Compression Spring Series offers a large selection of standard DIN size springs to meet increasing global demand for metric designs with the added benefit of excellent corrosion resistance.

The DIN-Plus Series is offered in two standard DIN Series types:

DIN2098 Part 2 – This smaller range of DIN2098 compression springs are made from stainless steel available in sizes from 1.0mm (0.039") to 52.4mm (2.063") long. Wire sizes range from 0.1mm (0.004") up to 0.4mm (0.016") over a selection of outside diameters to work inside hole diameters from 0.8mm (0.032") to 6.0mm (0.237"). All parts are right hand wound with ends squared, and not ground. The Lee Spring DIN-Plus Part 2 range is distinguished from other commercial offerings with Lee Spring's passivation finish, which maximizes the essential corrosion resistance versus non-passivated stainless steel.

DIN2098 Part 1 – This series includes the more standard to larger range of DIN2098 compression springs made of spring steel available in sizes from 4.4mm (0.173") to 1015mm (39.961") long. Wire sizes go from 0.5mm (0.020") up to 10mm (0.394") over a selection of outside diameters to work inside hole diameters from 3.4mm (0.134") to 140mm (5.512"). All parts are right hand wound with ends squared and ground for added stability under heavy loading. This series is also preset for wire sizes 1.25mm (0.049") and up which increases load carrying ability. The Lee Spring DIN-Plus Part 1 range also includes a zinc plate finish, which improves corrosion resistance and distinguishes the Lee Spring DIN-Plus Series from many other commercial offerings available.

Lee Spring can manufacture custom compression springs to your specifications. Contact us today!

DIN-Plus Compression Springs

Guide to using tables

Lee Stock Number:
Lee Spring Part Number.

To Work in Hole Diameter:
Suggested minimum hole size if needed for spring containment.

Nominal Wire Diameter:
In ascending order of size, within each group of outside diameters.

Working Height:
Suggested shortest operating height to avoid loading overstress.

Spring Rate:
Change in load or force per unit of deflection.

Price Group:
Reference for price list. **See fold-out section at rear of book.**

Outside Diameter:
Spring outer diameter, parts listed in ascending order.

To Work Over Rod Diameter:
Suggested maximum rod size if needed to guide the inside of the spring.

Nominal Load:
The approximate load or force to compress spring to the working height.

Nominal Free Length:
The overall height of a spring in the unloaded position.

Solid Height:
Length when fully compressed.

Additional Information

- Avoid operating beyond the listed Nominal Load and Working Height, or the stresses may cause permanent spring set or failure.
- Spring Rate is given as an approximate figure to allow manufacturing adjustment to maintain Nominal Load and Nominal Free Length.
- The listed Work In Hole Diameter and Work Over Rod Diameter are specified as per DIN 2098. To discuss spring fitting around different assembly sizes please call Lee Spring's Engineering Department, (888) 777-4647, prompt 3.

How to Determine Price

1. Select the spring you want by LEE STOCK NUMBER.
2. Read across to the last column PRICE GROUP to obtain the price code: when applicable, select the price code that corresponds to the material type required.
3. Refer to the PRICE GROUP in the appropriate pricing chart by spring type located in the back of this catalog for pricing up to 199 pieces of an item.
4. Prices subject to change without notice.

HEFTY™

Die Springs • Heavy Duty Compression Springs

Costs 20% to 50% Less and Shipping is FREE!

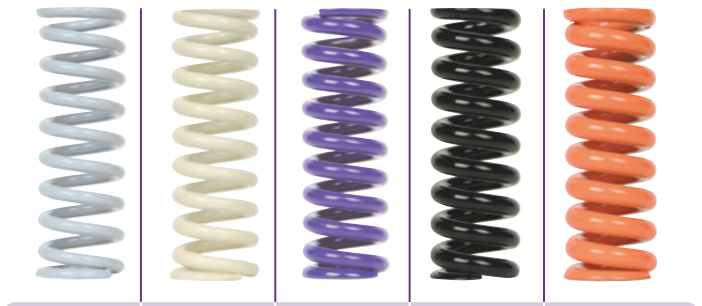

Only HEFTY™ Die Springs offer you the economy of round wire and the durability of chrome silicon or music wire, plus the World Class Service you've come to expect from Lee Spring.

HEFTY™ Die Springs are ideal for any high stress, heavy load application. Our customers have found that our high-performance HEFTY™ Die Springs are also great for use in such diverse applications as clutches, brakes, farm machinery and aircraft mechanisms. And Lee Spring offers five different types of durable HEFTY™ Die Springs with different load ratings to fit standard diameters.

Recent independent testing conducted by the Institute of Spring Technology has proven that Lee Spring's HEFTY™ Die Springs have a life-expectancy equal to traditional rectangular wire die springs.

To find out what HEFTY™ Die Springs can do for your application as well as your budget, call us at 888-777-4647, or visit us at www.leespring.com

HEFTY™ Die Springs

Guide to using tables

Lee Stock Number:
Lee Spring Part Number.

Hole Diameter:
Suggested minimum hole size if needed for spring containment.

Material:
Spring wire the spring is made from, M for Music Wire or C for Chrome Silicon.

Load at 50% Deflection:
The load or force required to deflect noted percentage of the free length.

Solid Height:
Length when fully compressed.

Rod Diameter:
Suggested maximum rod size if needed to guide the inside of the spring.

Nominal Outside Diameter:
Spring outer diameter, parts listed in ascending order.

Wire Diameter:
In ascending order of size, within each group of outside diameters.

Free Length:
The overall height of the spring in the unloaded position.

Spring Rate:
Change in load or force per unit of deflection.

Additional Information

Tips For Selecting And Using Hefty Die Springs

a) Determine if springs will be used for short run, average cycle long run, rapid cycle or extra stress and then refer to appropriate section (medium load, etc.).

b) Use as many springs in the die as space permits with the least amount of deflection.

c) The more rapidly a spring is cycled, the greater the need to operate within the ideal operating range.

d) Make sure hole and rod sizes in die are properly matched with spring. Faulty spring guidance will cause buckling and possible spring failure.

e) Preventive maintenance on dies should be performed on a regular basis and die springs should be replaced at appropriate intervals to prevent downtime.

f) Replace all springs in a die at the same time. This will insure an even distribution of the load.

g) Do not rework die springs by grinding the inside or outside diameter or by cutting off coils. This could result in premature spring failure and possible die damage.

h) Please note that load calculations for HEFTY™ springs are based on a deflection that is a percentage of the Free Length. "Load at 50% Deflection" should be interpreted to mean 50% deflection of the Free Length. The following is a sample calculation for the "Load at 50% Deflection" for Part Number LHL 375A 01, where Free Length = 1 inch and Rate = 56 lb/in and 50% of Free Length = 1/2 inch. The load is calculated by using the formula (found on page 3): P = R x F or R x F = P (i.e. 56 lb/in x 1/2 in = 28 lb.)

Find HEFTY Pricing On Pages 201–205

How to Determine Price

1. Select the spring you want by LEE STOCK NUMBER.
2. Refer to the LEE STOCK NUMBER in the appropriate pricing chart located on pages 201–205 for pricing from 1 to 199 of an item.
3. Prices subject to change without notice.
4. **FREE GROUND SHIPPING AVAILABLE ON ORDERS OF $40 OR MORE IN THE CONTINENTAL UNITED STATES.** Stock Parts orders with a parts value below $40.00 with delivery within the Continental United States will be charged freight, plus a $20.00 handling charge. Stock Parts orders with delivery outside the Continental United States with a parts value more than $40.00 will pay freight only and no handling charge.

REDUX™ Wave Springs

Space Critical Environment • Reduce Operating Height • Space Saving

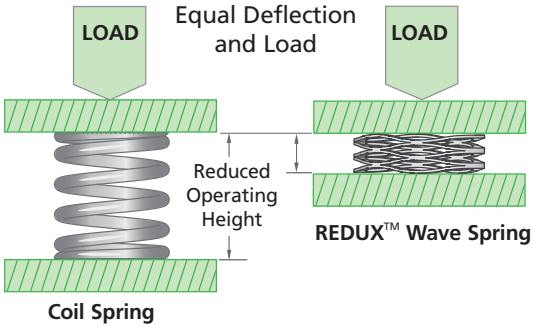

Lee Spring's REDUX™ Wave Springs offer optimum performance in reduced spatial environments. REDUX™ Wave Springs are designed to replace conventional round wire Compression Springs in applications requiring a tight load deflection specification in a space critical environment.

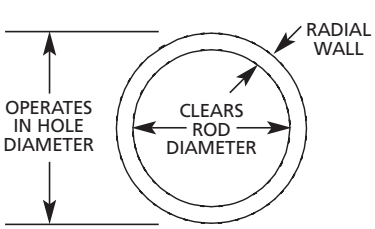

REDUX™ Wave Springs occupy a very small area relative to the amount of work they can perform. In fact, Lee Spring's REDUX™ Wave Springs can reduce the size and weight of the assembly by as much as 50%.

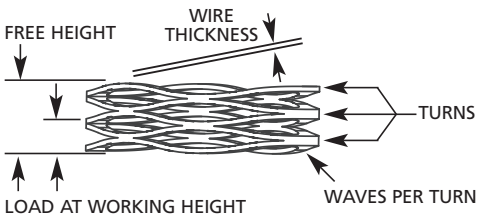

REDUX™ Wave Springs are manufactured from Type 17-7 Stainless Steel flat wire formed in continuous precise coils with uniform diameters and waves.

Specifications:

Material:	Stainless Steel Type 17-7 PH
Wire:	Pre-tempered flat wire
Maximum Temperature:	650 degrees F (340° C)
Finish:	Passivated
Coils:	Continuous Coil
Design:	Uniform diameter and wave heights

Lee Spring can manufacture custom REDUX™ wave springs to your specifications. Contact us today!

REDUX™ Wave Springs

Guide to using tables

Lee Stock Number: Lee Spring Part Number.

Rod Diameter: Suggested maximum rod size if needed to guide the inside of the spring.

Working Height: Suggested shortest operating height to avoid loading overstress.

Wire Thickness X Radial Wall: The thickness and width of flat wire used to make the spring.

Turns: The approximate number of circular turns of flat wire formed in a wave spring.

Waves Per Turn: The number of waves formed on the wire per full turn.

LW 025 02 0275S							.140	3.56	.275	6.99							

Hole Diameter: Suggested minimum hole size if needed for spring containment.

Nominal Load: The approximate load or force to compress spring to the working height.

Free Height: The overall height of a spring in the unloaded position.

Spring Rate: The change in load or force per unit of deflection.

Price Group: Reference for price list. **See fold-out section at rear of book.**

Additional Information

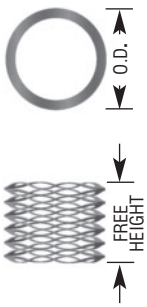

- Avoid operating beyond the listed Nominal Load and Working Height, or the stresses may cause permanent spring set or failure.
- Make sure to install the REDUX Wave Spring with the correct Hole and Rod sizes. The listed Hole Diameter and Rod Diameter are properly matched with the spring to insure clearance fit. The spring's Outside Diameter and Inside Diameter are approximate only.
- REDUX manufacturing spring rate ±25%.

How to Determine Price

1. Select the spring you want by LEE STOCK NUMBER.
2. Read across to the last column PRICE GROUP to obtain the price code: when applicable, select the price code that corresponds to the material type required.
3. Refer to the PRICE GROUP in the appropriate pricing chart by spring type located in the back of this catalog for pricing up to 199 pieces of an item.
4. Prices subject to change without notice.

SPECIAL INSTRUCTIONS FOR REDUX WAVE SERIES

PRICING: See Inside Back Cover for up to 199 pricing; to price or order up to 599 pieces, visit www.leespring.com; 600+ pieces, contact Lee Spring.
CUSTOM DESIGNS: Custom Wave Spring designs are available on request; see Custom Springs Section for Wave Spring specification form.

Belleville Spring Washer Series

High Load in Small Spaces

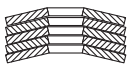

Lee Spring's series of Belleville Washers are ideal for applications requiring high loads in small spaces with minimal deflection.

Belleville Washers are often used to solve vibration, thermal expansion, relaxation and creep problems. The Lee Spring line of Belleville Washers are made of Type 300 Stainless Steel and are passivated to remove contaminants and further improve corrosion resistance. Type 300 Stainless Steel is slightly magnetic and is recommended for any application where the temperature is below 500˚ F (260˚ C). Lee Spring Belleville Washers are offered in a wide range of diameters and bolt sizes.

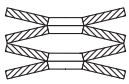

VARIOUS CONFIGURATIONS OF BELLEVILLE WASHERS

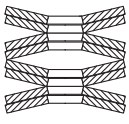

Single
ONE WASHER

Parallel
ALL WASHERS STACKED THE SAME WAY

Series
ALL WASHERS STACKED OPPOSITE EACH OTHER

Series Parallel
A COMBINATION OF THE TWO

Belleville Washers can be stacked in series, parallel, or a combination of both to achieve varying loads and height. Belleville Washers can be used in 4 different ways:

A single Belleville Washer has a specific load for a given deflection. Two washers stacked in parallel will yield double the load of a single washer for the same deflection; three washers will yield triple the load; four washers will yield four times the load, etc.

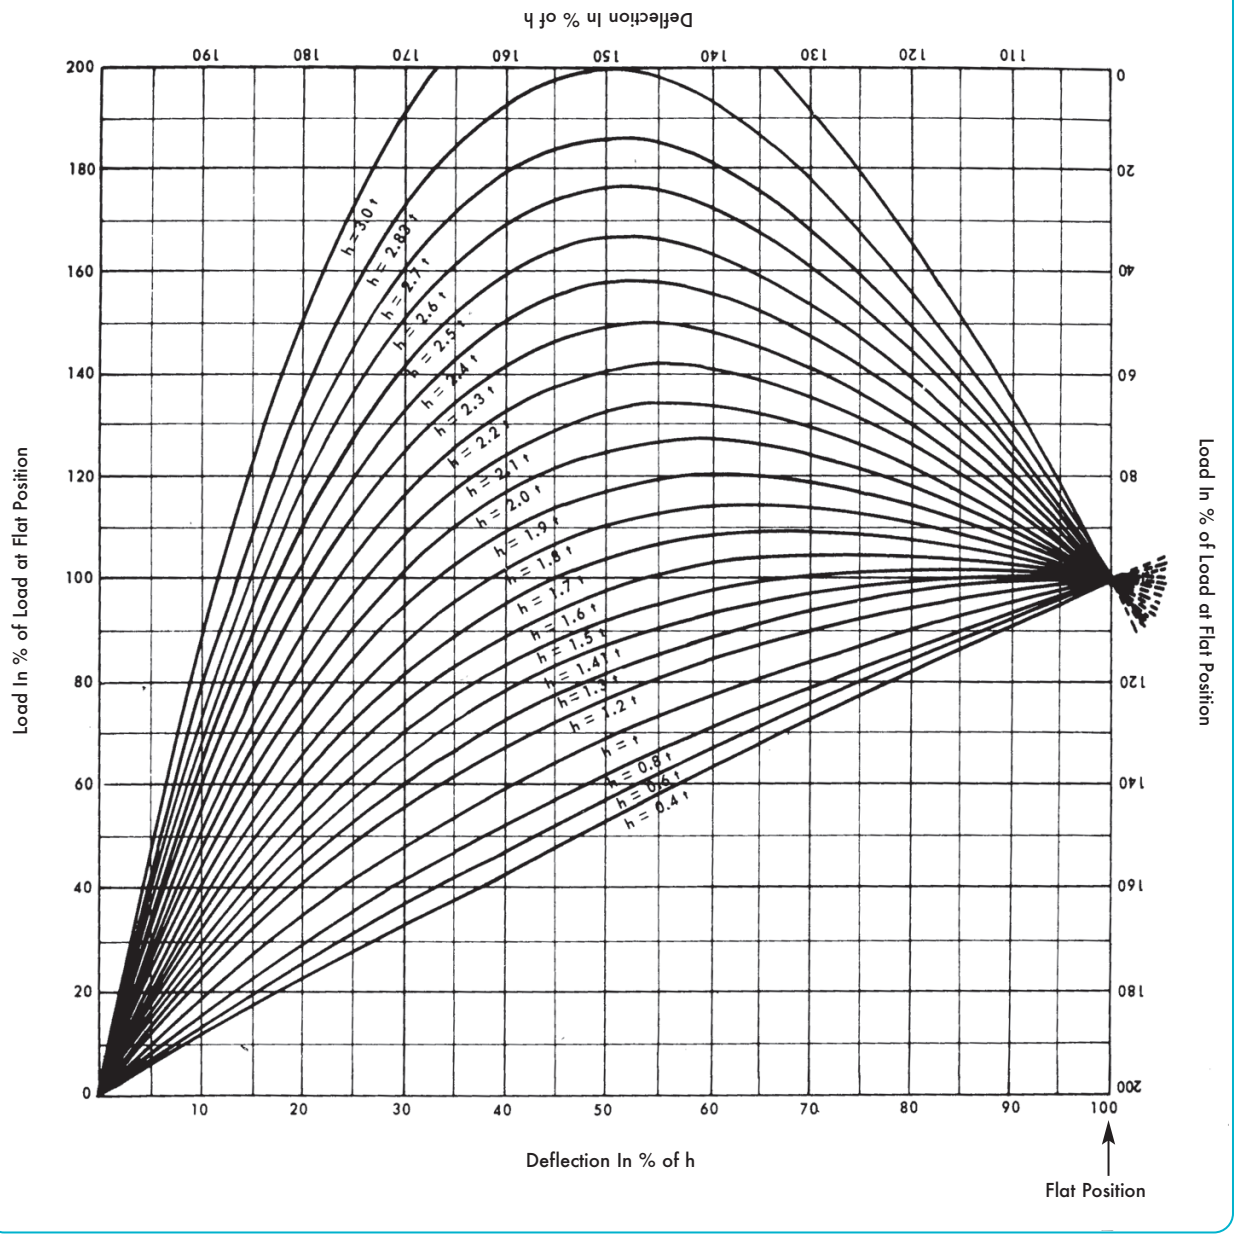

Alternatively, two washers stacked in series will yield double the deflection of a single washer for the same load; three washers will yield triple the deflection; four washers will yield four times the deflection, etc.

Various series-parallel combinations therefore can provide a wide variety of combined results of load versus deflection for the stack. Consequently, depending on the application, the designer can:

- Stack in parallel to increase the load.
- Stack in series to increase the deflection
- Adjust the load and deflection of a washer stack by adding or removing individual washers and/or the sequence in which they are used, whether in series or parallel.

Lee Spring can manufacture custom Belleville spring washers to your specifications. Contact us today!

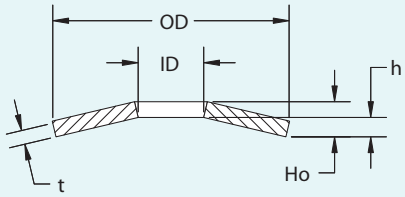

SELECTING BELLEVILLE WASHERS

Lee Spring Belleville Washer part numbers reflect three of the key measurement parameters. As shown in the diagram below the washer part number is configured as follows:

Washer Part Number **093-005-188**

Measurement Parameters **ID** **t** **OD**

ID Represents the washer inside diameter. This is a ***minimum*** measurement and reflects the **bolt size** that the washer will accommodate.

t Represents the washer material thickness as well as the washer solid (flat) height.

OD Represents the washer outside diameter. This outside diameter is the ***maximum*** outside diameter as supplied and prior to loading.

OTHER IMPORTANT CONSIDERATIONS ARE:

Ho Overall Height, unloaded

h h = Ho – t

Pmax Load at flat (the load at full compression)

In order to obtain intermediate loads for Belleville Washers, you can use the Load-Deflection diagram above.

Belleville Spring Washer Series

Guide to using tables

Lee Stock Number:
Lee Spring Part Number

Inside Diameter (ID):
Nominal hole size of washer's inside.

Thickness (t):
Material thickness.

Calculated Load at Flat (Pmax):
Theoretical load at full compression.

Price Group:
Reference for price list. **See fold-out section at rear of book.**

LEE STOCK NUMBER	BOLT SIZE	INSIDE DIAMETER (ID)		OUTSIDE DIAMETER (OD)		THICKNESS (t)		OVERALL HEIGHT UNLOADED (Ho)		CALCULATED LOAD AT FLAT (Pmax)		PRICE GROUP
		IN.	MM	IN.	MM	IN.	MM	IN.	MM	LB.	KG	300 Series Stainless
093-005-188				.188	4.78	.005	.13	.014	.36	5.7	2.6	W2
093-006-188				.188	4.78	.006	.15	.015	.38	9.8	4.5	W2

125-012-236				.236	5.99	.012	.30	.018	.46			W

Bolt Size:
Suggested maximum bolt size to guide the inside of the washer.

Outside Diameter (OD):
Nominal outside diameter of the washer. If used in a containment hole the hole must be greater than this dimension.

Overall Height Unloaded (Ho):
The height of the washer in the unloaded position.

Additional Information

- Belleville Washers manufactured from Type 300 Stainless Steel with passivated finish in accordance with ASTM A967.
- To minimize friction and optimize load, ensure stack of springs are guided over a rod or within a bore or cylinder.
- The calculated Load at Flat is provided for comparitive reference. Belleville loading is not qualified or tested at manufacturing.

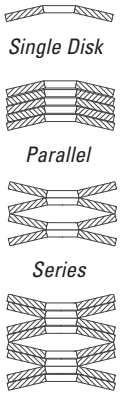

How to Determine Price

1. Select the spring you want by LEE STOCK NUMBER.
2. Read across to the last column PRICE GROUP to obtain the price code: when applicable, select the price code that corresponds to the material type required.
3. Refer to the PRICE GROUP in the appropriate pricing chart by spring type located in the back of this catalog for pricing up to 199 pieces of an item.
4. Prices subject to change without notice.

NOTES

Extension Springs: Instrument Series

Selection to Match Your Needs

The Lee Spring Extension Spring Instrument Series includes a wide range of size and rate combinations in a smaller, highly precise spring design. Selections are sorted in ascending order based on outside diameter.

Instrument Series Extension Springs are available in both inch and metric sizes. Sizes range from outside diameters from .063" up to .157" and free lengths from .250" to 1.181".

Inch Series springs are available in Music Wire, Type 302 Stainless Steel and Type 316 Stainless Steel. Metric Series springs are available in Music Wire and Type 302 Stainless Steel. The Music Wire springs are made from coated wire or provided with a plating finish for light corrosion resistance. The Type 302 Stainless Steel springs are passivated, while Type 316 Stainless Steel springs are passivated and ultrasonically cleaned.

Lee Spring can manufacture custom extension springs to your specifications. Contact us today!

Extension Springs: Instrument Series

Guide to using tables

Lee Stock Number:
Lee Spring Part Number, add suffix M for Music Wire, S for Stainless Steel or S316 for Type 316 Stainless Steel.

Maximum Load:
Design load to extend the spring to its maximum extended length for Music Wire.

Initial Tension:
Force that keeps the coils closed and which must be overcome before the coils start to move.

Spring Rate:
The change in load over unit of deflection.

Price Group:
Reference for price list. **See fold-out section at rear of book.**

Outside Diameter:
Spring outer diameter, parts listed in ascending order.

Wire Diameter:
In ascending order of size, within each group of outside diameters.

Free Length:
Length of the spring in the unloaded position, measured from inside the loops.

Maximum Extended Length:
Suggested longest operating spring position to avoid loading overstress. For Type 316 Stainless Steel, reduce to approximately 75%–90% of these lengths.

Additional Information

- To determine the load at any working length, when free length, rate and initial tension are given, use the formula: P=(R x F) + I.T. where P is the load in lbs.; R is the rate in lbs. per inch; F is the deflection from free length; I.T. is the initial tension.
- The free length of an extension spring is measured from inside the end loops. To obtain the overall length add two wire diameters to the given length.
- As with compression springs, in order to achieve long life and service, good design suggests that extension springs not exceed beyond 80% of their deflection capability.

How to Determine Price

1. Select the spring you want by LEE STOCK NUMBER.
2. Read across to the last column PRICE GROUP to obtain the price code: when applicable, select the price code that corresponds to the material type required.
3. Refer to the PRICE GROUP in the appropriate pricing chart by spring type located in the back of this catalog for pricing up to 199 pieces of an item.
4. Prices subject to change without notice.

SPECIAL INSTRUCTIONS FOR EXTENSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.

CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833). For Type 316 Stainless, multiply Spring Rate and Initial Tension by 5/6 (.833), Maximum Load and Maximum Extended Length should be reduced approximately 75%–90% that of Type 302 Stainless version. Visit leespring.com for more information regarding any S316 Stainless product calculations.

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

EXTENSION SPRINGS: INSTRUMENT SERIES (INCH)

SPECIAL INSTRUCTIONS FOR EXTENSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.

CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833). For Type 316 Stainless, multiply Spring Rate and Initial Tension by 5/6 (.833), Maximum Load and Maximum Extended Length should be reduced approximately 75%–90% that of Type 302 Stainless version. Visit leespring.com for more information regarding any S316 Stainless product calculations.

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

EXTENSION SPRINGS: INSTRUMENT SERIES (INCH)

SPECIAL INSTRUCTIONS FOR EXTENSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

Lee Spring®
leespring.com

A History of Innovation and Customer Service.

The story of Lee Spring began over 100 years ago in Brooklyn NY, where we still maintain our headquarters and one of our nine manufacturing facilities. We have enjoyed consistent growth throughout the years, listening to our customers' needs, and responding with a diverse line of quality products and services. With each innovation and market expansion, we build our reputation for responsiveness and increase our loyal customer base.

As Lee Spring continues to evolve into our second century, we are steadfast in our commitment to our customers and our promise of quality products and responsive innovations.

Lee Spring Timeline

- **1918:** Lee Spring founded by Robert Lee Johannsen on Union Street in Brooklyn NY.
- **1921:** Moved to 347-351 Classon Street, Brooklyn NY with expanded capabilities.
- **1931:** Moved to 30 Main Street, Brooklyn NY to accommodate growth.
- **1963:** Lee Spring publishes first Stock Catalog with 1300 products!
- **1966:** Connecticut manufacturing facility opens to service expanding custom spring, wire form and fourslide demand.
- **1978:** Lee Spring Limited, Wokingham UK opens, servicing Great Britain and Europe.
- **1981:** North Carolina sales and manufacturing facility opens to better serve customers in the Southeast.
- **1982:** New York headquarters and plant move to 62nd Street, Brooklyn NY.
- **1984:** Arizona sales and manufacturing facility opens to better serve the West Coast market.
- **1985:** Missouri sales and manufacturing facility opens to better serve customers in the Midwest.
- **2003:** Lee Spring de México sales and manufacturing facility opens in Monterrey México, serving México and Latin America.
- **2003:** Lee Spring receives our first ISO Certification.
- **2005:** Innovation- we are the first spring company to certify RoHS compliance on all Stock Springs.
- **2006:** Innovation- the industry's first Type 316 stock spring offering of over 3000 designs introduced.
- **2007:** Lee Spring Company (Shanghai) Ltd. opens, servicing China and the Pacific Rim market.
- **2008:** Innovation- unique Lite Pressure™ Compression Springs line introduced.
- **2008:** Lee Spring's Global Headquarters and New York plant relocate to the historic Brooklyn Army Terminal.
- **2009:** ISO 9001 Certification is renewed in all locations.
- **2010:** Innovation- the revolutionary LeeP™ Plastic Composite Spring line introduced.
- **2010:** Innovation- unique BANTAM™ Mini Compression Springs introduced.
- **2011:** Innovation- 3000+ MIL-SPEC springs added to stock offering, responding to Aerospace and Military market.
- **2013:** Lee Spring Company India Pvt. Ltd. opens in Bangalore, serving the Indian Sub-continent and the Asian Middle East.
- **2014:** Innovation- High Pressure Compression Spring line introduced.
- **2014:** Lee Spring opens in Halver, Germany.
- **2015:** Innovation: LeeP™ Plastic Composite Spring awarded US Patent.
- **2016:** Lee Spring expands German operations to Lüdenscheid, Germany.
- **2017:** Innovation: DIN-Plus Compression Series introduced.
- **2017:** Lee Spring becomes ISO 9001:2015 registered.
- **2018:** Lee Spring opens second China facility in Tianjin.
- **2018:** Lee Spring celebrates 100 Year Anniversary.
- **2019:** Lee Spring expands US operations with new facilities in California and Maryland.
- **2019:** Lee Spring expands UK operations with a second facility in Todmorden, Lancashire UK.
- **2021:** Lee Spring expands US operations with new facilities in Michigan and Connecticut.

Extension Springs: Standard Series

Selection to Match Your Needs

The Lee Spring Standard Extension Spring line includes a wide range of size and rate combinations. Selections are sorted in ascending order based on outside diameter. Standard Extension Springs are available in both inch and metric series.

Standard Series springs are available in Music Wire, Type 302 Stainless Steel and Type 316 Stainless Steel. Metric Series springs are available in Music Wire and Type 302 Stainless Steel. The Music Wire springs are provided with a plating finish for light corrosion resistance. The Type 302 Stainless Steel springs are passivated, while Type 316 Stainless Steel springs are passivated and ultrasonically cleaned.

Lee Spring's Stock Extension Springs are supplied with full diameter loops (either to machine or crossover center style) at a random position with the exception of Metric Extension Springs which are specified to meet DIN Standards. Loop openings are approximately one wire diameter and the direction of wind is factory optional. If exact direction of helix is required, Custom Extension Springs can be made to specification.

Lee Spring can manufacture custom extension springs to your specifications. Contact us today!

Extension Springs: Standard Series

Guide to using tables

Lee Stock Number:
Lee Spring Part Number, add suffix M for Music Wire, S for Stainless Steel or S316 for Type 316 Stainless Steel.

Maximum Load:
Design load to extend the spring to its maximum extended length for Music Wire.

Initial Tension:
Force that keeps the coils closed and which must be overcome before the coils start to move.

Spring Rate:
The change in load over unit of deflection.

Price Group:
Reference for price list. **See fold-out section at rear of book.**

LEE STOCK NUMBER	OUTSIDE DIAMETER		WIRE DIAMETER		MAXIMUM LOAD		INITIAL TENSION		FREE LENGTH		SPRING RATE		MAXIMUM EXTENDED LENGTH		PRICE GROUP

Outside Diameter:
Spring outer diameter, parts listed in ascending order.

Wire Diameter:
In ascending order of size, within each group of outside diameters.

Free Length:
Length of the spring in the unloaded position, measured from inside the loops.

Maximum Extended Length:
Suggested longest operating spring position to avoid loading overstress. For Type 316 Stainless Steel, reduce to approximately 75%–90% of these lengths.

Additional Information

- Maximum Load and Maximum Extended Length are calculated using nominal designs. These figures are provided for referencing only. To determine the load at any working length based on nominal free length, spring rate, and initial tension use the formula:
  P=(R x F) + I.T.
  where P is the load in lbs.; R is the spring rate in lbs. per inch; F is the deflection in inches (or final spring length minus the free length; I.T. is the initial tension in lbs.
- The free length of an extension spring is measured from inside the end loops. To obtain the overall length add two wire diameters to the given length.
- As with compression springs, in order to achieve long life and service, good design suggests that extension springs not exceed beyond 80% of their deflection capability.

How to Determine Price

1. Select the spring you want by LEE STOCK NUMBER.
2. Read across to the last column PRICE GROUP to obtain the price code: when applicable, select the price code that corresponds to the material type required.
3. Refer to the PRICE GROUP in the appropriate pricing chart by spring type located in the back of this catalog for pricing up to 199 pieces of an item.
4. Prices subject to change without notice.

FREE SHIPPING AVAILABLE
See Price List in back of catalog for details.

SPECIAL INSTRUCTIONS FOR EXTENSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.

CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833). For Type 316 Stainless, multiply Spring Rate and Initial Tension by 5/6 (.833), Maximum Load and Maximum Extended Length should be reduced approximately 75%–90% that of Type 302 Stainless version. Visit leespring.com for more information regarding any S316 Stainless product calculations.

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

EXTENSION SPRINGS: STANDARD SERIES (INCH)

LOOPS AT RANDOM POSITION • **Music Wire (Plated), 302 Stainless Steel* (Passivated), or 316 Stainless Steel (Passivated Ultrasonically Cleaned)**

SPECIAL INSTRUCTIONS FOR EXTENSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.

CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833). For Type 316 Stainless, multiply Spring Rate and Initial Tension by 5/6 (.833), Maximum Load and Maximum Extended Length should be reduced approximately 75%–90% that of Type 302 Stainless version. Visit leespring.com for more information regarding any S316 Stainless product calculations.

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

LOOPS AT RANDOM POSITION • **Music Wire (Plated), 302 Stainless Steel* (Passivated), or 316 Stainless Steel (Passivated Ultrasonically Cleaned)**

SPECIAL INSTRUCTIONS FOR EXTENSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.

CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833). For Type 316 Stainless, multiply Spring Rate and Initial Tension by 5/6 (.833), Maximum Load and Maximum Extended Length should be reduced approximately 75%–90% that of Type 302 Stainless version. Visit leespring.com for more information regarding any S316 Stainless product calculations.

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

EXTENSION SPRINGS: STANDARD SERIES (INCH)

LOOPS AT RANDOM POSITION • ***Music Wire (Plated), 302 Stainless Steel* (Passivated), or 316 Stainless Steel (Passivated Ultrasonically Cleaned)***

SPECIAL INSTRUCTIONS FOR EXTENSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.

CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833). For Type 316 Stainless, multiply Spring Rate and Initial Tension by 5/6 (.833), Maximum Load and Maximum Extended Length should be reduced approximately 75%–90% that of Type 302 Stainless version. Visit leespring.com for more information regarding any S316 Stainless product calculations.

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

LOOPS AT RANDOM POSITION • **Music Wire (Plated), 302 Stainless Steel* (Passivated), or 316 Stainless Steel (Passivated Ultrasonically Cleaned)**

SPECIAL INSTRUCTIONS FOR EXTENSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.

CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833). For Type 316 Stainless, multiply Spring Rate and Initial Tension by 5/6 (.833), Maximum Load and Maximum Extended Length should be reduced approximately 75%–90% that of Type 302 Stainless version. Visit leespring.com for more information regarding any S316 Stainless product calculations.

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

EXTENSION SPRINGS: STANDARD SERIES (INCH)

LOOPS AT RANDOM POSITION • **Music Wire (Plated), 302 Stainless Steel* (Passivated), or 316 Stainless Steel (Passivated Ultrasonically Cleaned)**

SPECIAL INSTRUCTIONS FOR EXTENSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.

CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833). For Type 316 Stainless, multiply Spring Rate and Initial Tension by 5/6 (.833), Maximum Load and Maximum Extended Length should be reduced approximately 75%–90% that of Type 302 Stainless version. Visit leespring.com for more information regarding any S316 Stainless product calculations.

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

LOOPS AT RANDOM POSITION • **Music Wire (Plated), 302 Stainless Steel* (Passivated), or 316 Stainless Steel (Passivated Ultrasonically Cleaned)**

SPECIAL INSTRUCTIONS FOR EXTENSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.

CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833). For Type 316 Stainless, multiply Spring Rate and Initial Tension by 5/6 (.833), Maximum Load and Maximum Extended Length should be reduced approximately 75%–90% that of Type 302 Stainless version. Visit leespring.com for more information regarding any S316 Stainless product calculations.

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

EXTENSION SPRINGS: STANDARD SERIES (INCH)

SPECIAL INSTRUCTIONS FOR EXTENSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.

CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833). For Type 316 Stainless, multiply Spring Rate and Initial Tension by 5/6 (.833), Maximum Load and Maximum Extended Length should be reduced approximately 75%–90% that of Type 302 Stainless version. Visit leespring.com for more information regarding any S316 Stainless product calculations.

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

LOOPS AT RANDOM POSITION • **Music Wire (Plated), 302 Stainless Steel* (Passivated), or 316 Stainless Steel (Passivated Ultrasonically Cleaned)**

SPECIAL INSTRUCTIONS FOR EXTENSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.

CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833). For Type 316 Stainless, multiply Spring Rate and Initial Tension by 5/6 (.833), Maximum Load and Maximum Extended Length should be reduced approximately 75%–90% that of Type 302 Stainless version. Visit leespring.com for more information regarding any S316 Stainless product calculations.

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

SPECIAL INSTRUCTIONS FOR EXTENSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.

CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833). For Type 316 Stainless, multiply Spring Rate and Initial Tension by 5/6 (.833), Maximum Load and Maximum Extended Length should be reduced approximately 75%–90% that of Type 302 Stainless version. Visit leespring.com for more information regarding any S316 Stainless product calculations.

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

EXTENSION SPRINGS: STANDARD SERIES (INCH)

LOOPS AT RANDOM POSITION • **Music Wire (Plated), 302 Stainless Steel* (Passivated), or 316 Stainless Steel (Passivated Ultrasonically Cleaned)**

SPECIAL INSTRUCTIONS FOR EXTENSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.

CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833). For Type 316 Stainless, multiply Spring Rate and Initial Tension by 5/6 (.833), Maximum Load and Maximum Extended Length should be reduced approximately 75%–90% that of Type 302 Stainless version. Visit leespring.com for more information regarding any S316 Stainless product calculations.

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

SPECIAL INSTRUCTIONS FOR EXTENSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.
† Indicates DIN Extension Springs meeting the design parameters outlined in Standard DIN 2097.

SPECIAL INSTRUCTIONS FOR EXTENSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless.

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.

CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833).

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

† Indicates DIN Extension Springs meeting the design parameters outlined in Standard DIN 2097.

R = Loops at Random Position • I = Loops at Inline Position

SPECIAL INSTRUCTIONS FOR EXTENSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless.

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.

CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833).

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion.

† Indicates DIN Extension Springs meeting the design parameters outlined in Standard DIN 2097.

CUSTOM SPRINGS
TO YOUR SPECIFICATIONS

- **Engineering Support From Design Through Production**
- **Extensive Material and Finish Options**
- **Global Manufacturing and Distribution**
- **CAD Assisted Product Design**
- **Governmental & Industrial Regulatory Expertise**
- **Prototypes Through Large Production Runs**

nqa ISO 9001:2015 Registered

ROHS COMPLIANT

REACH COMPLIANT

Lee Spring offers design and manufacturing of custom springs to meet your detailed specifications or physical requirements. Work with a Lee Spring Engineer to help resolve design issues, selection of materials and finishes and ensuring the spring design is optimized for your application.

From prototypes through large scale production runs, Lee Spring provides the engineering and manufacturing support you deserve.

Lee Spring®

Torsion Spring Series

Selection to Match Your Needs

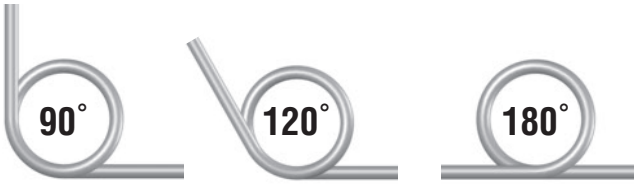

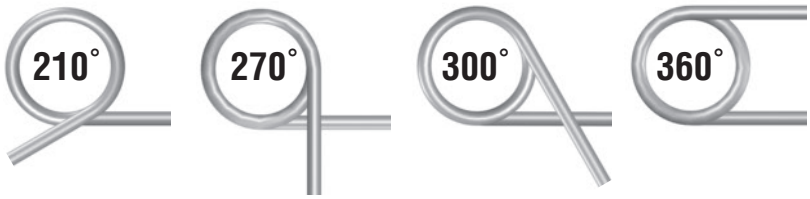

Lee Spring's Torsion Springs have been carefully designed to represent the most commonly used specifications in both inch and metric sizes.

The Torsion Spring selection is divided into seven categories by Free Position of Legs (90˚, 120˚, 180˚, 210˚, 270˚, 300˚, 360˚) and both left-hand and right-hand wound springs are shown.

Direction of Wind:

Good design dictates that torsion springs should be used in the direction that winds the coil. When ordering, select either LTL (left-hand wound) or LTR (right-hand wound) for required application.

Mandrel Size:

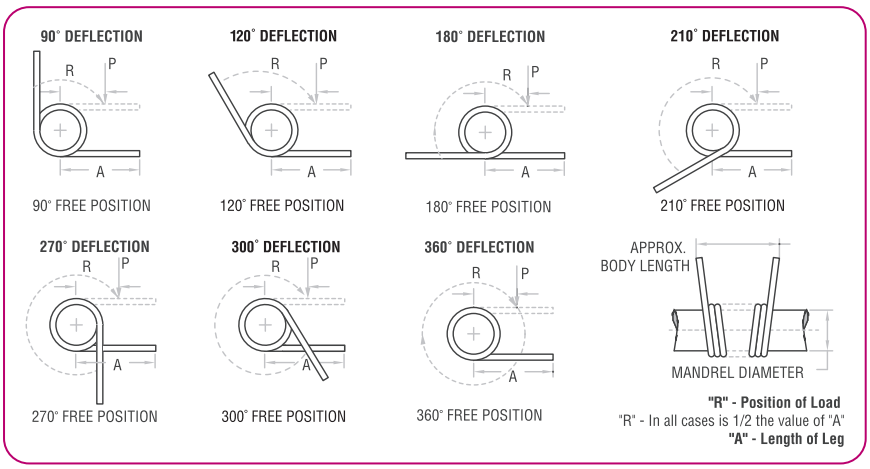

Generally, torsion springs are used over a mandrel (shaft or arbor). The column "Suggested Mandrel Size", allows approximately a 10% clearance for the various deflections shown in examples below. If you require greater deflection, a reduction in mandrel size is suggested.

Lee Spring can manufacture custom torsion springs to your specifications. Contact us today!

General Notes

1. Lengths of legs are shown as "A" in sketches below.
2. It is to be noted that "R" (radius in inches) where force is applied is always 1/2 of "A" (Length of Leg). Dotted lines of legs show loaded position where values of "T" (Torque) will be achieved at "R" (Radius).
3. To translate torque values to direct load:
   Use Formula P=T/R
   P = Load applied at Radius (R), T = Torque
   Example: Part LTL 012 A 01
   What is the load where R = .187?
   Using P = T/R = .050/.187 = .267lbs.
4. To calculate torque values other than those listed, a direct proportion may be used.
   Example: Part LTL 012 A 01
   Torque shown in catalog listing is .050 inch-lbs. for 90° deflection (for Music Wire); therefore, torque at 45° deflection would be .025 inch-lbs.
5. Inspection of Load – Loads should always be checked at the Radius ("R" value).

Specifications

Material:
- Music Wire
- 302 Stainless Steel
- 316 Stainless Steel

Plating:
Zinc Plated .0002"
(ASTM B-633)

Torsion springs of wire size 0.025" and less may be furnished using pre-coated wire at Lee Spring's discretion without supplemental zinc plating.

Passivation:
(ASTM A-967)
(Mil. Spec. No. QQ-P-35)
(Type 316 Stainless also ultrasonically cleaned)

Tolerances on Torque: ± 10%

Torsion Spring Series

Guide to using tables

Lee Stock Number:
Lee Spring Part Number, add suffix M for Music Wire, S for Stainless Steel or S316 for Type 316 Stainless Steel.

Wire Diameter:
Wire diameter of spring wire.

Radius:
Suggested contact point for load and torque inspection, typically at 1/2 of A (length of leg).

Length Of Leg:
The leg length measured from the body's centerline to end of leg.

Price Group:
Reference for price list. **See fold-out section at rear of book.**

Outside Diameter:
Spring body outer diameter, parts listed in ascending order.

Torque @ 'X' Deflection (T):
Design torque load to rotate the spring to its maximum suggested deflection, noted by 'X' degrees to avoid loading overstress.

Suggested Mandrel Size:
Suggested rod size to guide the inside of the spring, allowing for manufacturing tolerances and working to maximum deflection. Larger mandrel sizes may work with reduced working deflection.

Body Length Approx.:
Overall length of the spring coil body.

Number Of Coils:
Total coils in the spring.

How to Determine Price

1. Select the spring you want by LEE STOCK NUMBER.
2. Read across to the last column PRICE GROUP to obtain the price code: when applicable, select the price code that corresponds to the material type required.
3. Refer to the PRICE GROUP in the appropriate pricing chart by spring type located in the back of this catalog for pricing up to 199 pieces of an item.
4. Prices subject to change without notice.

FREE SHIPPING AVAILABLE
See Price List in back of catalog for details.

SPECIAL INSTRUCTIONS FOR TORSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Torque shown is for Music Wire. For Type 302 Stainless, multiply figures shown by (0.933). For Type 316 Stainless, the Torque and Deflection should be reduced approximately 65%–90% that of Type 302 Stainless version. Visit leespring.com for more information regarding any S316 Stainless product calculations.

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion. **Wires 0.025" and less are Instrument Torsion, see note on Page 5 under Finish

SPECIAL INSTRUCTIONS FOR TORSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.

CALCULATIONS: Torque shown is for Music Wire. For Type 302 Stainless, multiply figures shown by (0.933). For Type 316 Stainless, the Torque and Deflection should be reduced approximately 65%–90% that of Type 302 Stainless version. Visit leespring.com for more information regarding any S316 Stainless product calculations.

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion. **Wires 0.025" and less are Instrument Torsion, see note on Page 5 under Finish

TORSION SPRINGS: 90° FREE POSITION (INCH)

*Music Wire (Plated**) or 302 Stainless Steel* (Passivated) or 316 Stainless Steel (Passivated Ultrasonically Cleaned),*

SPECIAL INSTRUCTIONS FOR TORSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Torque shown is for Music Wire. For Type 302 Stainless, multiply figures shown by (0.933). For Type 316 Stainless, the Torque and Deflection should be reduced approximately 65%–90% that of Type 302 Stainless version. Visit leespring.com for more information regarding any S316 Stainless product calculations.

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion. **Wires 0.025" and less are Instrument Torsion, see note on Page 5 under Finish

TORSION SPRINGS: 270° FREE POSITION (INCH)

*Music Wire (Plated**) or 302 Stainless Steel* (Passivated) or 316 Stainless Steel (Passivated Ultrasonically Cleaned),*

SPECIAL INSTRUCTIONS FOR TORSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.

CALCULATIONS: Torque shown is for Music Wire. For Type 302 Stainless, multiply figures shown by (0.933). For Type 316 Stainless, the Torque and Deflection should be reduced approximately 65%–90% that of Type 302 Stainless version. Visit leespring.com for more information regarding any S316 Stainless product calculations.

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion. **Wires 0.025" and less are Instrument Torsion, see note on Page 5 under Finish

SPECIAL INSTRUCTIONS FOR TORSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless; "S316" for Type 316 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Torque shown is for Music Wire. For Type 302 Stainless, multiply figures shown by (0.933). For Type 316 Stainless, the Torque and Deflection should be reduced approximately 65%–90% that of Type 302 Stainless version. Visit leespring.com for more information regarding any S316 Stainless product calculations.

*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion. **Wires 0.025" and less are Instrument Torsion, see note on Page 5 under Finish

SPECIAL INSTRUCTIONS FOR TORSION SERIES

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless.
PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Torque shown is for Music Wire. For Type 302 Stainless, multiply figures shown by (0.933).
*Note: Type 302 may be substituted with Type 304 at Lee Spring's discretion. **Wires 0.025" and less are Instrument Torsion, see note Page 5 under Finish.

LeeP™ Plastic Composite Spring Series

Non-Magnetic Material • High Corrosion Resistance • High Strength to Weight Ratio

LeeP™ Plastic Composite Springs are an innovative compression spring designed to have properties unavailable in a metal spring. The LeeP™ Plastic Composite Spring Series offers a wide range of sizes and strength combinations. This unique non-magnetic spring offers high corrosion resistance, excellent strength to weight ratio and designed to perform under load with minimal side thrust.

Made of a unique formulation using Ultem* PEI resins, the LeeP™ Series is designed for optimal performance in a wide range of applications.

The LeeP™ Series is available in color coded strengths for ease of identification (weakest to strongest):

- Red
- Orange
- Yellow
- Green
- Violet

LeeP™ Plastic Compression Springs offer many advantages including:

- Unique patented designs to maximize spring rates and cycle life, while minimizing solid height (US Patent No. 8,939,438 B2).
- High strength to weight ratios that optimize performance while reducing mass.
- Excellent stability of physical and mechanical properties at temperatures up to 340°F (171° C).
- High corrosion resistance and generally compatible with many chemicals including strong acids, weak bases, aromatics, and ketones.
- Non-magnetic material does not interfere with imaging and other Ferro-sensitive technologies.
- Dielectric insulating material suitable for non-conductive applications.
- Low flammability and toxicity ensuring environmental safety.
- Recyclable and compliant with most Global regulations including RoHS and REACH.

*Typical properties of Ultem**	
Tensile Strength [ASTM D638]	15,000 psi minimum
Ultimate Shear Strength [ASTM D732]	Approx. 15,000 psi
Thermal Conductivity	0.85 BTU-in/hr-ft²-°F
Max. Working Temperature [or Relative Thermal Index (Continuous, air)]	340 °F (171°C)
Dielectric Constant [1 MHz; ASTM D150(2)]	3.15
Dielectric Strength [Short Term; ASTM D149(2)]	830 V/mil
Flammability UL94 Low	(V-0)
Outgassing Total Mass Loss	0.40%
Non-magnetic	YES
Recyclable	YES
Chemical Resistance	
Strong Acids	Excellent Resistance[1]
Weak Bases	Excellent Resistance[1]
Alcohols	Excellent Resistance[1]
Ethers	Excellent Resistance[1]
Inorganic Salt Solutions	Excellent Resistance[1]
Steam	Excellent Resistance[1]
Weak Alkalis	Excellent Resistance[1]

NOTE: This information represents typical values intended for reference only. Environmental Stress Cracking Resistance [ESCR] to Chemicals at 73˚F (23˚C) and at 0.25-0.5% strain under immersion unless otherwise specified.

Lee Spring can manufacture custom LeeP™ plastic springs to your specifications. Contact us today!

LeeP™ Plastic Composite Spring Series

Guide to using tables

Lee Stock Number:
Lee Spring Part Number.

Hole Diameter:
Suggested minimum hole size for spring containment.

Rod Diameter:
Suggested maximum rod size to guide the inside of the spring.

Approx. Load @ Solid Height:
The load or force required to bring all coils into contact.

Spring Rate:
The change in load per unit of deflection.

Price Group:
Reference for price list. **See fold-out section at rear of book.**

Color:
Represents the strength of the spring.

Outside Diameter:
Spring outer diameter, parts listed in ascending order.

Material Thickness X Radial Wall:
The thickness and width of flat cross-section used to make the spring.

Free Length:
The overall height of the spring in the unloaded position.

Solid Height:
Length when fully compressed.

Additional Information

- LeeP™ Plastic Composite Springs can be stacked and/or nested to vary lengths and spring rates.
- Custom design capability to meet unique performance requirements.

(Note: A flat plastic washer could be used between springs while stacking for better performance.)

How to Determine Price

1. Select the spring you want by LEE STOCK NUMBER.
2. Read across to the last column PRICE GROUP to obtain the price code: when applicable, select the price code that corresponds to the material type required.
3. Refer to the PRICE GROUP in the appropriate pricing chart by spring type located in the back of this catalog for pricing up to 199 pieces of an item.
4. Prices subject to change without notice.

FREE SHIPPING AVAILABLE
See Price List in back of catalog for details.

*Trademark of SABIC Innovative Plastics IP BV. (1) Excellent resistance equals greater than 90% retention of mechanical properties.

LeeP™ Plastic Composite Compression Springs

Size Range:
Fit in Hole: .375" - 1"/ 9.53 mm - 25.4 mm
Free Length: .375" - 1.25"/ 9.53 mm - 31.75 mm
- Color-Coded Strengths
- Ultem* Resin

Stock Compression Springs

Size Range:
Outside Diameter: .024" - 5.315"/.60 mm - 135 mm
Free Length: .039" - 40"/1 mm - 1015 mm
Wire Size: .004" - .437"/.10 mm - 11 mm
Products and Materials:
Bantam Mini Compression Springs (Inch and Metric)
- Elgiloy®†

Instrument Compression Springs (Inch and Metric)
- Ends square, not ground
- Pre-coated Music Wire or Passivated Type 302/304 Stainless
- Passivated & Ultrasonically Cleaned Type 316 Stainless**

Lite Pressure Compression Springs (Inch)
- Passivated & Ultrasonically Cleaned Type 316 Stainless**

Standard Compression Springs (Inch and Metric)
- Squared and Ground Ends
- Plated Music Wire or Passivated Type 302/304 Stainless
- Passivated & Ultrasonically Cleaned Type 316 Stainless**

Heavy Duty Compression Springs (Inch)
- Squared and Ground Ends
- Shot-Peened and Pre-Set
- Plated Music Wire/Oil Tempered MB Wire or Passivated Stainless

High Pressure Compression Springs (Inch)
- Squared and Ground Ends
- Shot-Peened and Pre-Set
- Passivated Type 17-7 PH Stainless Steel

DIN-Plus Part 2 Compression Springs (Metric)
- Ends Squared, Not Ground
- Passivated Stainless Steel EN 10270-3 Grade 1.4310-NS

DIN-Plus Part 1 Compression Springs (Metric)
- Squared and Ground Ends
- Plated Spring Steel EN 10270-1-SH

HEFTY™ Die Springs

Size Range:
Fit in Hole: .375" - 2"/ 9.53 mm - 50.80 mm
Free Length: 1" - 12"/ 25.40 mm - 304.80 mm
Products and Materials:
Five Color Coded Series Reflecting Increasing Strengths
- Medium, Medium Plus, Medium Heavy, Heavy, Extra Heavy
- Round Music Wire or Chrome Silicon
- Squared and Ground Ends
- Powder Coated
- Shot-Peened and Pre-set

REDUX™ Wave Springs

Size Range:
Outside Diameter: .210" - 1.707"/ 5.33 mm - 43.36 mm
Free Height: .060" - 2.000"/ 1.52 mm - 50.80 mm
Material:
Passivated 17-7 PH Stainless Steel

Notes:
* Ultem is a registered trademark of SABIC Innovative Plastics IP BV.
** Type 316 Stainless Steel Stock option only available on Inch Stock Springs.
† Elgiloy is a trademark of Elgiloy Ltd. Partnership.
Elgiloy may be substituted with equivalent cobalt alloy at Lee Spring's discretion.
Type 302 may be substituted with Type 304 at Lee Spring's discretion.

Belleville Washers

Size Range:
Outside Diameter: .188" - 3.750"/ 4.78 mm - 95.25 mm
Inside Diameter: .093" - 2.063"/ 2.36 mm - 52.40 mm
Material:
Passivated 300 Series Stainless Steel

Stock Extension Springs

Size Range:
Outside Diameter: .063" - 2.0"/1.60 mm - 50.80 mm
Free Length: .250" - 11.417"/ 6.35 mm - 290.00 mm
Wire Size: .007" - .207"/.18 mm - 5.26 mm
Loop Configuration:
- Random position, full diameter machine or crossover center, except those noted to meet DIN 2097.
- Loop openings approximately one wire diameter
- Direction of wind optional

Products and Materials:
Instrument Extension Spring Series (Inch and Metric)
- Pre-coated Music Wire or Passivated Type 302/304 Stainless
- Passivated & Ultrasonically Cleaned Type 316 Stainless**

Standard Extension Spring Series (Inch and Metric)
- Plated Music Wire or Passivated Type 302/304 Stainless
- Passivated & Ultrasonically Cleaned Type 316 Stainless**

Stock Torsion Springs

Size Range:
Outside Diameter: .103" - 2.141"/ 2.62 mm - 54.38 mm
Work Over Rod: .059" - 1.656"/ 1.50 mm - 42.06 mm
Leg Length: .375" - 4.25" / 9.53 mm - 107.95 mm
Products and Materials:
- Free Position of Legs: 90º, 120º, 180º, 210º, 270º, 300º, 360º

Instrument Torsion Spring Series (Inch and Metric)
- Pre-coated Music Wire or Passivated Type 302/304 Stainless
- Passivated & Ultrasonically Cleaned Type 316 Stainless**

Standard Torsion Spring Series (Inch and Metric)
- Plated Music Wire or Passivated Type 302/304 Stainless
- Passivated & Ultrasonically Cleaned Type 316 Stainless**

Specialty Products

Stainless Steel Constant Force Springs
- Load Range: .23 lbs. - 16.5 lbs./0.1 kg - 7.48 kg
- Material Widths: .250" - 1.25"/6.35 mm - 31.75 mm

Battery Springs
- Nickel Coated Music Wire or Silver Coated Beryllium Copper
- Multiple configurations to fit AA, AAA, C or D

MIL-SPEC Springs
- MS24585 Compression
- MS24586 Extension

Drawbar Springs
- Medium Load and High Load Series
- One Round End and One Strap End

Constant Force Spring Series

Smooth Operation Under Stress

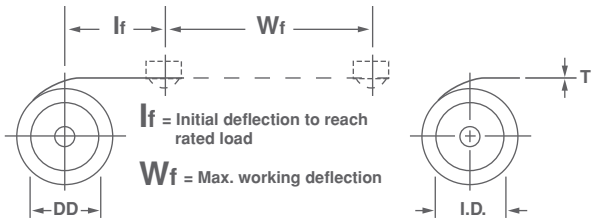

The Lee Spring Series of extension type Constant Force Spring's represent the most versatile type available. Ideal for use when smooth operating forces are required. Available in four Life Cycle ranges, 2500, 4000, 13000 and 25000. Each spring is made of a high yield Type 301 Stainless Steel strip exerting a nearly constant restraining force to resist uncoiling.

Constant Force springs offer the advantage of a smooth operation across the operating range. When the strip is extended (deflected) the inherent stress resists the loading force, the same as a common extension spring, but at a nearly constant (zero) rate. A constant torque is obtained when the outer end of the spring is attached to another spool and caused to wind in either the reverse or same direction as it is originally wound.

The full rated load of the spring is reached after being deflected to a length equal to 1.25 times its diameter. Thereafter, it maintains a relatively constant force regardless of extension length. Load is basically determined by the thickness and width of the material and the diameter of the coil.

Guide to Mounting Constant Force Springs:

Additional Information

- A Constant Force Spring is usually mounted by first tightly wrapping it on a drum, then attaching the free end to the loading force such as in a counterbalance application. This relationship can also be reversed.
- The drum diameter should be 10 to 20% larger than its natural inside diameter.
- One and one-half wraps should remain on the drum at maximum extension.
- The strip becomes unstable at long extensions and should be guided to prevent twisting or kinking on recoil.
- Idler pulleys must be larger in diameter than the natural diameter and should never be used to cause back-bending against the natural radius of curvature.

Lee Spring can manufacture custom constant force springs to your specifications. Contact us today!

Constant Force Spring Series

Guide to using tables

Lee Stock Number:
Lee Spring Part Number.

Thickness:
The thickness of the material used to make the spring.

Length:
The length of the spring material if fully unwound.

Working Deflection:
The maximum deflection beyond initial deflection which a spring can be loaded.

Drum Diameter:
The outside diameter of a drum or shaft over which a spring fits firmly.

2500 Life Cycles

Life Cycles:
The calculated fatigue life for the number of times a spring can be loaded and unloaded between two points.

Width:
The material width used to make the spring.

Initial Deflection:
The minimum deflection needed to extend an unloaded spring to its design load.

Inside Diameter:
The natural inside diameter of a spring before assembling with a drum.

Load:
The design constant force exerted by the spring in the working deflection range.

HOW TO DETERMINE LEE CONSTANT FORCE SPRING PRICING:

1. Select the spring you want by LEE STOCK NUMBER.
2. Refer to the PRICE TABLE below for quantities from 1-199 of any items.
3. Prices subject to change without notice.
4. For pricing or to place on-line orders of up to 599 pieces of an item, visit www.leespring.com. For pricing of 600 pieces and above, please submit a request through www.leespring.com or contact us by email, phone or fax.
5. **FREE GROUND SHIPPING AVAILABLE ON ORDERS OF $40 OR MORE IN THE CONTINENTAL UNITED STATES.**
   Stock Parts orders with a parts value below $40.00 with delivery within the Continental United States will be charged freight, plus a $20.00 handling charge. Stock Parts orders with delivery outside the Continental United States with a parts value more than $40.00 will pay freight only and no handling charge.

FREE SHIPPING on orders of $40 or more

SPECIAL INSTRUCTIONS FOR CONSTANT FORCE SPRINGS

PRICING: See Page 316 for pricing up to199 pcs. To price or order up to 599 pieces, visit www.leespring.com; 600+ pcs., contact Lee Spring.

CUSTOM DESIGNS: Custom Constant Force Springs are available on request; see Custom Springs Section for Constant Force Springs specification form.

With over 25,000 stock springs, extensive custom capabilities and over 100 years of expertise, Lee Spring continues to respond to yesterday's needs, today's demands and tomorrow's technology. We lead the industry with innovative products like LeeP™ Plastic Composite Springs, BANTAM™ Mini Springs, Lite Pressure™ Springs and now High Pressure Springs.

Whether you need 1 spring or 10 million springs, our World-Class Service and comprehensive website make finding the right spring easy. Call or email us today to learn more.

Lee Spring®
leespring.com

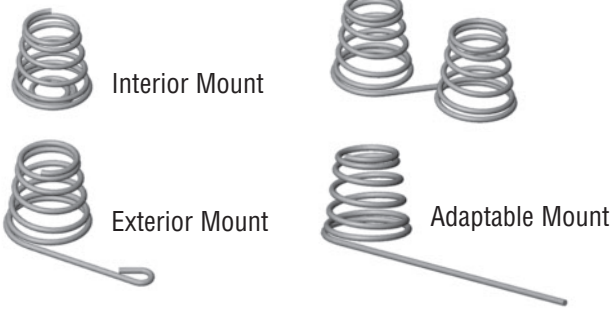

Battery Spring Series

Variable Mounts for Common Battery Sizes

Lee Springs Battery Series Springs offer conical springs that are perfect for prototyping through large production runs. Available to fit most battery sizes: AAA, AA, C, and D. These stock springs are available in four mounting designs, including an adaptable style which can be easily configured to your specific application. Designed to adjust to various battery lengths and to provide low contact resistance and dependable connections.

Mounting Types:

The Lee Spring Battery Series is ideal for use in molded cases with self-contained battery compartments or in many other common mounting applications.

Materials:

- **Nickel Coated Music Wire:** Since most alkaline batteries have nickel plated containers, a nickel coating for the metal contacts is suitable. The use of similar materials removes the possibility of galvanic corrosion and aids in wear resistance. Nickel will also tend to wipe and aid in breaking down the oxide that can form on the battery metal contact surface. In addition, a nickel coating will provide general corrosion resistance and is an excellent conductor of electricity.
- **Silver Coated Beryllium Copper:** Beryllium Copper is among the hardest, strongest and most wear-resistant of copper alloys. Silver coating further enhances electrical and thermal conductivity. The electric conductivity is 65-70% that of copper; the strength and fatigue resistance are comparable to higher beryllium alloys. The light silver coating allows for easy soldering. Beryllium copper is corrosion resistant in various environments and is both non-magnetic and non-sparking.

Lee Spring can manufacture custom battery springs to your specifications. Contact us today!

Battery Spring Series

Guide to using tables

Lee Stock Number: Lee Spring Part Number

Wire Diameter: Wire diameter of spring wire.

ID Top: The inside diameter at the top coil of the spring.

ID Eyelet: The inside diameter of the eyelet at the spring end, where applicable.

Center to Center Length: The distance between points as shown in graphics, dependent on mounting type.

Price Group: Reference for price list. **See fold-out section at rear of book.**

Battery Size: The battery size the spring has been designed to work with.

OD Base: The outside diameter at the base coil of the spring.

Free Length: The overall height of the spring in the unloaded position.

Approx Load: The load or force required to reach the installed height.

@ Installed Height: The suggested design height for the compressed spring after a battery installation.

Additional Information

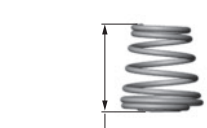

- Adaptable Mount type battery springs have an extended leg which can be configured for mounting as needed.
- Custom battery springs, spring loaded contacts or stampings can be manufactured to fit your application.

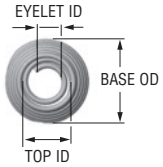

How to Determine Price

1. Select the spring you want by LEE STOCK NUMBER.
2. Read across to the last column PRICE GROUP to obtain the price code: when applicable, select the price code that corresponds to the material type required.
3. Refer to the PRICE GROUP in the appropriate pricing chart by spring type located in the back of this catalog for pricing up to 199 pieces of an item.
4. Prices subject to change without notice.

SPECIAL INSTRUCTIONS FOR BATTERY SPRINGS

PRICING: See Inside Back Cover for up to 199 pricing. To price or order up to 599 pieces, visit www.leespring.com; 600+ pieces, contact Lee Spring.

CUSTOM DESIGNS: Custom Battery Springs are available on request; see Custom Springs Section for Battery Springs specification form.

Continuous Length Extension Springs

Adaptable Cut to Length Extension Springs

Lee Spring's Continuous Length Extension Springs are excellent for prototyping or when an extension spring needs to be configured quickly in the shop or on the road.

The Continuous Length Extension Spring is designed to be cut to length as needed. Keep a selection of Continuous Length Extension springs on hand and be ready to configure a spring at any time.

Continuous Length springs are available in 3 length configurations (12", 24", and 36" lengths) and in a wide range of outside diameter and stiffness combinations, matching Lee Spring's most popular stock extension springs.

Available in two material options, Music Wire and Type 302 Stainless Steel. Music Wire springs are provided with an oiled finish for light corrosion resistance.

How to Configure a Continuous Length Spring:

Step 1

Fold Spring 180˚ at desired length and cut. Cut shorter than needed by one-half the coil body diameter.

Step 2

Across from cut end, bend last coil up at 45˚ angle. To form double loop, bend last two coils up 45˚. Do not use heat!

Step 3

Twist cut end of loop into center of coil body. This may require pliers. You may have to twist past center to allow the loop to flex back.

Step 4

Cut end of newly formed loop to obtain any gap needed for mounting.

Lee Spring can manufacture custom continuous length extension springs to your specifications. Contact us today!

Continuous Length Extension Springs

Guide to using tables

Lee Stock Number: Lee Spring Part Number, add suffix M for Music Wire or S for Stainless Steel.

Outside Diameter: Spring outer diameter, parts listed in ascending order.

Initial Tension: Force that keeps the coils closed and which must be overcome before the coils start to move.

Stiffness: Factor used to calculate spring rate based on the final cut length.

Price Group: Reference for price list. **See fold-out section at rear of book.**

LEE STOCK NUMBER	OUTSIDE DIAMETER		WIRE DIAMETER		FREE LENGTH		INITIAL TENSION		APPROX. NUMBER OF COILS/IN.	STIFFNESS K	PRICE GROUP Music Wire	PRICE GROUP #302 Stainless
	IN.	MM	IN.	MM	IN.	MM	LB.	KG			M	S

Wire Diameter: In ascending order of size, within each group of outside diameters.

Free Length: The overall length of the spring in the unloaded position.

Approx Number of Coils/In.: The number of coils in each inch of length.

Additional Information

- All Continuous Length Extension Springs are right hand wound.
- To determine the spring rate per inch of extension for the final cut spring, use the following formula:
  Rate = K / N
  where K = Stiffness Factor, N = Number of Coils per Inch Factor X Cut Body Length in Inches
- To determine the load at an extended length, multiply deflection by the spring rate and add the initial tension.

How to Determine Price

1. Select the spring you want by LEE STOCK NUMBER.
2. Read across to the last column PRICE GROUP to obtain the price code: when applicable, select the price code that corresponds to the material type required.
3. Refer to the PRICE GROUP in the appropriate pricing chart by spring type located in the back of this catalog for pricing up to 199 pieces of an item.
4. Prices subject to change without notice.

SPECIAL INSTRUCTIONS FOR CONTINUOUS LENGTH SPRINGS

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless.
PRICING: See Inside Back Cover for pricing up to 199; 200+ pieces contact Lee Spring.
CALCULATIONS: Spring Stiffness and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833).

SPECIAL INSTRUCTIONS FOR CONTINUOUS LENGTH SPRINGS

STOCK NUMBERS: Add "M" to end of Stock Number for Music Wire; "S" for Type 302 Stainless.
PRICING: See Inside Back Cover for pricing up to 199; 200+ pieces contact Lee Spring.
CALCULATIONS: Spring Stiffness and Initial Tension are for Music Wire. For Type 302 Stainless, multiply figures shown by 5/6 (.833).

Continuous Length Stock Extension Springs in Three Lengths: 12" - 24" - 36"

Available exclusively at www.leespring.com.

Wire Diameters and Outside Diameters match Lee Spring's most popular Stock Extension Spring dimensions. Over 260 designs available.

- Excellent for prototype development or maintenance applications.
- Wire Diameter and Outside Diameters match Lee Spring's most popular Stock Extension Spring dimensions.
- Select Music Wire with Light Oil Coat or 302 Stainless Steel.
- Available in 12", 24" or 36" lengths.
- Designed to be cut to required length by user to meet load requirements.
- Various loops or hooks can be formed on the ends using looping pliers or other appropriate instruments.
- All Continuous Length Springs are Right Hand Wound.

MIL-SPEC Springs

Compression MS24585 and Extension MS24586

Materials:

All MIL-SPEC springs are available in the four authorized AS24585 and AS24586 materials:

- Uncoated Music Wire per ASTM A228.
- Cadmium Plated Music Wire in accordance with SAE-AMS-QQ-P-416, Type II, Class 2.
- Zinc Plated Music Wire in accordance with ASTM B633, Type II, Fe/Zn5.
- Corrosion Resistant Stainless Steel 302 per ASTM A313 with passivation treatment in accordance with ASTM A967 or AMS2700. DFARS Compliant material only.

About DFARS Compliance

DFARS regulates the supply country for certain materials. It applies to Stainless Steel but does not apply to Music Wire. For a complete explanation of DFARS Compliance, go to the Regulatory Compliance and Certification Page 383.

MIL-SPEC Springs available in Stock.

When you need MIL-SPEC Springs, Lee Spring simplifies the purchasing process by offering the full range of MIL-SPEC Compression Springs and Extension Springs.

- Simplified pricing – no complicated price grids.
- Paperwork included – no additional charges for material certifications or traceability.
- Free ground shipping in the Continental United States for orders of $40.00 or more.
- DFARS Compliance – all Stainless Steel MIL-SPEC springs meet DFARS specifications.
- Quick RFQ turnaround – quantities over 1000.

About MIL- SPEC Springs

These products are part of the United States Defense Standard. They are used to help achieve standardization objectives set by the U.S. Department of Defense. They are known interchangeably as “military standards”, "MIL-SPEC", “MIL-STD", or "MilSpecs." These high precision designs meet stringent technical requirements and are used in a multitude of Military and Aerospace applications, both defense and non-defense related. MIL-SPEC springs are increasingly specified by other non-Defense government organizations, technical organizations, and highly regulated industries. The MIL-SPEC standard for compression springs for loads below 20 lbs. is AS24585; this standard was formerly MS24585. The MIL-SPEC standard for extension springs for loads below 30 lbs. is AS24586; this was formerly MS24586.

Lee Spring can manufacture custom MIL-SPEC springs to your specifications. Contact us today!

MIL-SPEC Springs

Guide to using tables

Lee Stock Number: Lee Spring Part Number.

OD: Spring outer diameter, parts listed in ascending order.

W: Wire diameter of spring wire.

Active Coils: Those coils which are free to deflect under load.

Load: The design load or force to compress spring by its deflection design.

Price Group: Reference for price list. **See fold-out section at rear of book.**

Free Length: The overall height of the spring in the unloaded position.

Deflection Per Coil: Amount of movement per coil to achieve the design load.

Deflection: The amount of spring movement under the design load.

Solid Height: Length when fully compressed.

Rate: Change in load or force per unit of deflection.

Part Numbers

Be sure to specify the complete numbers as designated by AS24585 and AS24586. MIL-SPEC Springs begin with the prefix MS24585 or MS24586 followed by a hyphen and the part number, e.g., MS24585-1002 or MS24586-C13. The following chart is a helpful reference:

MIL-SPEC	Unplated	Cadmium Plated	Zinc Plated	Stainless Steel
Compression MS24585	MS24585-1 through MS24585-527	MS24585-1001 through MS24585-1527	MS24585-2010 through MS24585-2507	MS24585-C1 through MS24585-C527
Extension MS24586	MS24586-1 through MS24586-354	MS24586-501 through MS24586-854	MS24586-1006 through MS24586-1354	MS24586-C1 through MS24586-C354

How to Determine Price

1. Select the spring you want by LEE STOCK NUMBER.
2. Read across to the last column PRICE GROUP to obtain the price code: when applicable, select the price code that corresponds to the material type required.
3. Refer to the PRICE GROUP in the appropriate pricing chart by spring type located in the back of this catalog for pricing up to 199 pieces of an item.
4. Prices subject to change without notice.

SPECIAL INSTRUCTIONS FOR MS24586 EXTENSION SPRINGS

PRICING: See Inside Back Cover for pricing up to 199 pcs. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Stainless Steel, multiply figures shown by 5/6 (.833)
COMPLIANCE: All Stainless Steel MS24586 parts are DFARS Compliant; CADPlated MS24586 parts are NOT RoHS compliant.

SPECIAL INSTRUCTIONS FOR MS24586 EXTENSION SPRINGS

PRICING: See Inside Back Cover for pricing up to 199 pcs. To price or order up to 1000 pcs., visit leespring.com; 1000+ pcs. contact Lee Spring.
CALCULATIONS: Spring Rate, Maximum Load and Initial Tension are for Music Wire. For Stainless Steel, multiply figures shown by 5/6 (.833)
COMPLIANCE: All Stainless Steel MS24586 parts are DFARS Compliant; CADPlated MS24586 parts are NOT RoHS compliant.

Lee Spring Engineering

Since 1918, Lee Spring has been manufacturing, engineering, and designing springs, formed metal parts and related products for a wide variety of industries.

Lee Spring Engineers can offer assistance from design conception through production. Lee Spring's extensive expertise in spring design and mechanical engineering will complement your design team.

Lee Spring Offers...

- Extensive Custom Spring Capabilities
- Expert Engineering Assistance Available
- Engineering Support from Design through Production
- Extensive Material and Finish Options
- Global Manufacturing and Distribution
- CAD Assisted Production Design
- Manufacturing Prototypes through Large Production Runs

Drawbar Springs

Made in the USA, Excellent Corrosion Resistance and a Bright Finish

Lee Spring offers a series of four stock Drawbar Springs: (2) medium load type and (2) high load type to match with your specific application, plus options for custom Drawbar Springs.

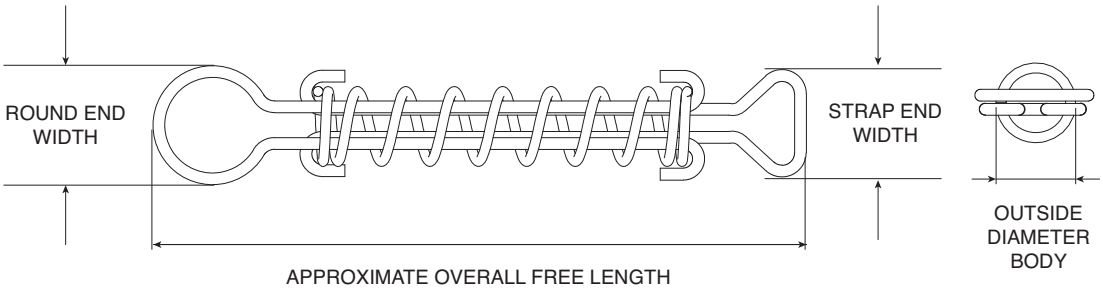

Lee Spring Drawbar Series includes:

- Tumbled bright and smooth finish.
- Stainless steel material for excellent corrosion resistance.
- Round end on one side and strap end on the other.

Drawbar Springs are assemblies in which the main spring will compress as the drawbars extend under an applied load. They are often capable of withstanding loads far in excess of the compression springs closing force and should be considered in applications where a positive stop of overload protection is required. Because of the Drawbar Spring's unique characteristic as an extension spring with a fixed stop, potential overstretching is eliminated.

Lee Spring can manufacture custom drawbar springs to your specifications. Contact us today!

HOW TO DETERMINE LEE SPRING DRAWBAR PRICING:

FREE SHIPPING on orders of $40 or more

1. Select the spring you want by LEE STOCK NUMBER.
2. Refer to the PRICE TABLE for quantities up to 199 pieces of an item.
3. Prices are subject to change without notice.
4. **FREE GROUND SHIPPING AVAILABLE ON ORDERS**
   Stock Parts orders with a parts value below $40.00 with delivery within the Continental United States will be charged freight, plus a $20.00 handling charge. Stock Parts orders with delivery outside the Continental United States with a parts value more than $40.00 will pay freight only and no handling charge.

Custom Springs & Formed Wire Parts

We turn ideas into reality.

Custom springs and wire forms made to your specifications.

You know what you want. Now how do you make it happen? That's where we come in. Since 1918, Lee Spring has been manufacturing custom springs and wire forms for just about any application you can think of. If needed, our experienced engineers will work closely with you from inception to completion so there is nothing left to chance. The result? A world-class custom product you can count on each and every time.

- Custom Springs Made to Any Specifications
- Complete Engineering Support Available
- Formed Wire Parts, Stampings and Fourslide Parts
- Over 100 Years of Spring Engineering Experience
- Over 25,000 Spring Designs in Stock

ROHS COMPLIANT

For your next spring project, give us a call at 1-888-777-4647, prompt 3 for Engineering. With your ingenuity and our experience, the possibilities are endless.

Custom Springs, Wire Forms, Stampings and Fourslide Parts

Lee Spring Offers Support for Every Stage of Custom Design, Manufacturing And Distribution

- Applications/concurrent engineering staff
- Regulatory expertise including RoHS, REACH and DFARS
- Proof of concept methodologies
- CAD assisted product design, drawing and modeling
- In-house prototype production services for rapid turnaround
- Global supply chain network for both production and distribution
- Blanket agreement and consignment inventory management capabilities
- Short and long production run capabilities
- In-house tooling production including EDM
- Proprietary integrated quality control system
- Extensive experience working with Aerospace/Military specifications (AS9100), automotive specifications (TS16949) and FDA Trial Support (21 CFR Part 820)
- ISO 9001:2015 registered quality management system

From Start to Finish, Lee Spring has the Custom Capabilities You Need!

Spring Types and Dimensions		
Compressed Springs	*Outside Diameter: 0.010"– 5.75"/0.25 mm – 146.1 mm*	*Wire Diameter: 0.002"– 0.625"/0.05 mm – 15.88 mm*
Extension Springs	*Outside Diameter: 0.010"– 5.75"/0.25 mm – 146.1 mm*	*Wire Diameter: 0.002"– 0.625"/0.05 mm – 15.88 mm*
Torsion Springs	*Outside Diameter: 0.010"– 5.75"/0.25 mm – 146.1 mm*	*Wire Diameter: 0.002"– 0.625"/0.05 mm – 15.88 mm*
Wave Springs	*Outside Diameter: 0.210"– 5.000"/5.33 mm – 127.0 mm*	*Inside Diameter: 0.150"– 4.54"/3.81 mm – 115.32 mm*
Constant Force	*Min. Outside Diameter: 0.340"/8.636 mm* *Min. Length: 11.80"/299.72 mm*	*Inside Diameter: 0.280"– 1.97"/7.11 mm – 50.04 mm*
Wire Forms	*Wire Diameters: 0.010"– 0.24"/0.25 mm – 6 mm*	*Maximum Finished Length: 60"/1524 mm*
Stampings	*Strip Width: up to 3" /76.20 mm*	*Strip Thickness: 0.005 to 0.062"/0.13 mm – 1.57 mm*
Fourslide Parts	*Strip Width: 0.010"– 0.500"/0.25 mm – 12.70 mm* *Strip Thickness: 0.003"– 0.125"/0.08 mm – 3.18 mm*	*Wire Diameter: 0.005"– 0.187"/0.13 mm – 4.75 mm*

Distinct production capabilities including: Plastic Compression, Drawbar, Cone, Double Torsion, Specialty Extension and more.

Materials

- Beryllium Copper
- Brass
- Carbon Steel, Hard Drawn
- Carbon Steel, Oil Tempered
- Chrome Silicon, Oil Tempered
- Chrome Vanadium, Oil Tempered
- Elgiloy®*
- Hastelloy®**
- Inconel®§
- Monel®§
- Music Wire
- Phosphor Bronze
- Plastic Composites
- Stainless Steel, 300 Series
- Stainless Steel, 17-7

Compression springs are open-coil helical springs wound or constructed to oppose compression along the axis of wind. Helical Compression Springs are the most common spring configuration. Generally, they are either placed over a rod or fitted inside a hole. When you put a load on a compression spring, making it shorter, it pushes back against the load and tries to get back to its original length. Compression springs offer resistance to linear compressing forces (push), and are in fact one of the most efficient energy storage devices.

Compression springs can be supplied with ground ends for improved squareness and reduced solid heights.

Comprehensive Capabilities

Configurations:

- Cylindrical • Conical • Barrel • Hourglass
- Closed Ends • Open Ends • Reduced Ends
- Ground Ends • Unground Ends
- Constant Pitch • Variable Pitch

Secondaries:

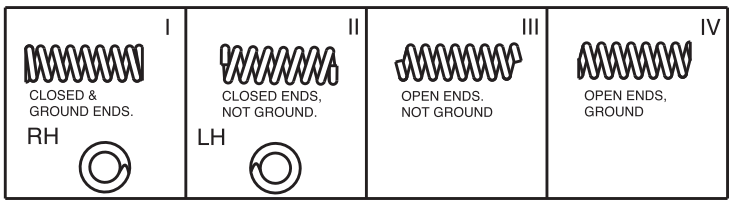

- Stress Relieve • Heat Treating • Passivation
- Shot Peening • Plating • Painting
- Powder Coating • Grinding

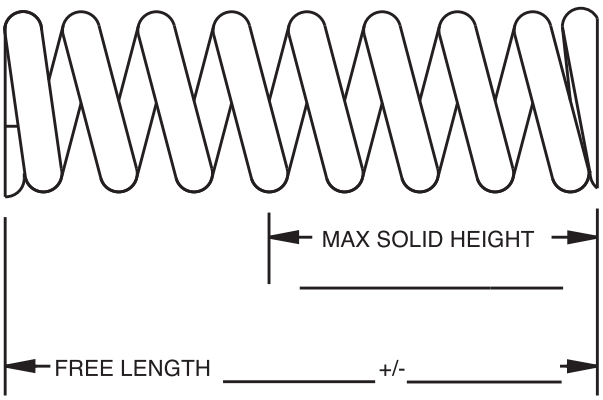

Wire sizes from .002" through .625"

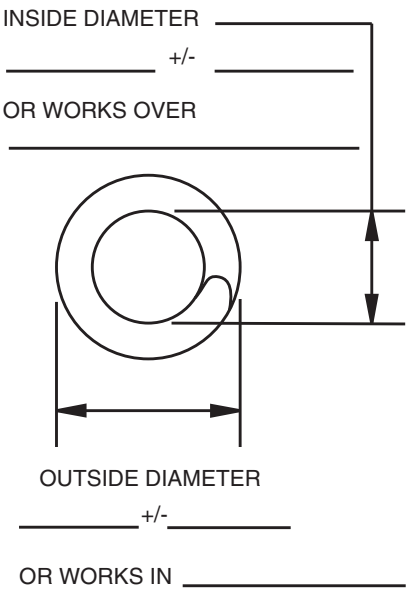

Materials:

- Carbon Steels • Alloy Steels
- Stainless Steel 17-7, 302, 304 and 316
- Phosphor Bronze
- Hastelloy • Inconel 600, 718 and x750
- Beryllium Copper • Elgiloy®†

CUSTOM CONED COMPRESSION SPRINGS

SPECIFICATION FORM

Coned compression springs are often specified when the large end is meant to work in a hole and the small end is meant to work over a rod. They offer the advantage of a reduced solid height compared to straight compression springs particularly when designed to telescope.

Coned compression springs can be supplied with ground ends for improved squareness to further reduce solid heights.

Comprehensive Capabilities

Configurations:

- Closed Ends • Open Ends • Reduced Ends • Ground Ends
- Unground Ends • Eyelet • Double Spring
- Constant Pitch • Variable Pitch

LeeP™ Plastic Composite Springs can be molded to exact customer specifications, with resulting tolerances exceeding those generally found in metal springs. Custom colors may be specified using the Pantone Matching System® (PMS) or other color systems. Although Lee Spring recommends Ultem* resins, we can produce Custom LeeP Springs in other plastic resins to meet application requirements.

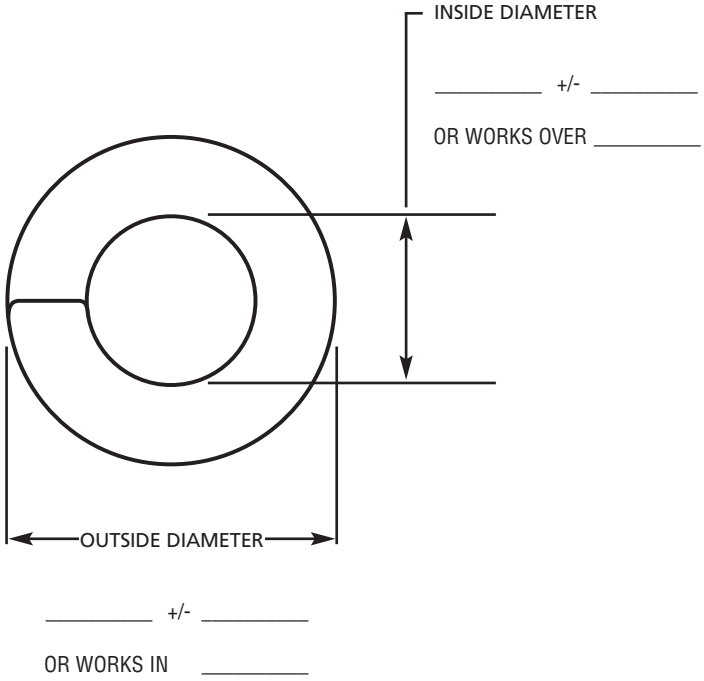

Potential Applications

- Medical Products and Processing Equipment
- Pharmaceutical Delivery Devices
- Imaging and X-Ray Equipment
- Food Processing and Packaging Equipment
- Aerospace or Marine Products
- Electronics and Electrical Equipment
- Water Purification and Pollution Control Systems
- Chemical Environments
- Semi-conductors
- Instrumentation
- Communication Devices
- Cosmetics Packaging Equipment

Extension springs absorb and store energy as well as create a resistance to a pulling force. It is initial tension that determines how tightly together an extension spring is coiled. This initial tension can be manipulated to achieve the load requirements of a particular application.

Extension springs are often tightly wound in the free (no-load) position and have loops, hooks, eyes, or other interface geometry at the ends to attach to the components they connect. They are frequently used to provide return force to components that extend in the actuated position.

Coned Extension Springs or Conical End Reduced Extension Springs are made by coiling two or three or even four coils of the spring body gradually smaller in diameter.

As with straight-bodied extension springs, a wide variety of ends are available for Coned Extension Springs including machine (twist) loops, crossover center loops, side loops, threaded inserts, swivel hooks, and extended hooks.The most common configurations can be made in conjunction with the manufacture of the conical extension springs bodies.

Coned Extension Springs are best suited for heavy duty or high cycle applications. The hooks can be designed for extended life, as compared to standard extension springs of similar dimensions. Swivel hook configurations can be particularly advantageous in that the ends are free to rotate to assure alignment and reduce hook stress.

Drawbar Springs are assemblies in which the main spring will compress as the drawbars extend under an applied load. They are often capable of withstanding loads far in excess of the compression springs closing force and should be considered in applications where a positive stop of overload protection is required. Because of the Drawbar Spring's unique characteristic as an extension spring with a fixed stop, potential overstretching is eliminated.

Torsion Springs are helical springs that exert a torque or rotary force. The ends of torsion springs are attached to other components, and when those components rotate around the center of the spring, the spring tries to push them back to their original position. Although the name implies otherwise, torsion springs are subjected to bending stress rather than torsional stress. They can store and release angular energy or statically hold a mechanism in place by deflecting the legs about the body centerline axis.

This type of spring is normally close wound but can have increased pitch to reduce friction between the coils. They offer resistance to twist or rotationally applied force. Depending on the application, torsion springs can be designed to work in a clockwise or counter-clockwise rotation, thus determining the direction of the wind.

Constant force springs are a special variety of extension spring. They are tightly coiled wound bands of pre-hardened spring steel or stainless steel strip with built-in curvature so that each turn of the strip wraps tightly on its inner neighbor. When the strip is extended (deflected) the inherent stress resists the loading force, the same as a common extension spring, but at a nearly constant (zero) rate.

The constant-force spring is well suited to long extensions with no load build-up. In use, the spring is usually mounted with the ID tightly wrapped on a drum and the free end attached to the loading force, such as in a counterbalance application. This relationship can be reversed, however, with the free end mounted stationary and the spring itself providing the working force, as with carbon brushes in electrical apparatus. Considerable flexibility is possible with constant-force springs because the load capacity can be multiplied by using two or more strips in tandem, or back-to-back.

CUSTOM BATTERY SPRINGS

SPECIFICATION FORM

Lee Spring Company manufactures custom battery springs, as well as stamped and fourslide contacts to match your specifications.

Custom Battery Springs can be configured to meet custom specifications and materials. When designing Battery Springs, determine the contact location based on the American National Standards Institute (ANSI) and International Electrotechnical Commission (IEC) standard dimensions. Reference should be made to ANSI Standard C18 and IEC Standard IEC86.

Designs can be accommodated for a wide range of Battery sizes, beyond the commonly specified AA, AAA, C and D sizes.

Comprehensive Capabilities

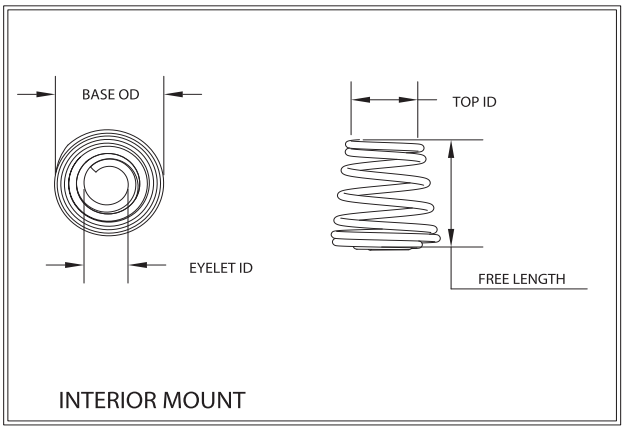

Configurations:

- Interior Mount • Exterior Mount • Double Mount

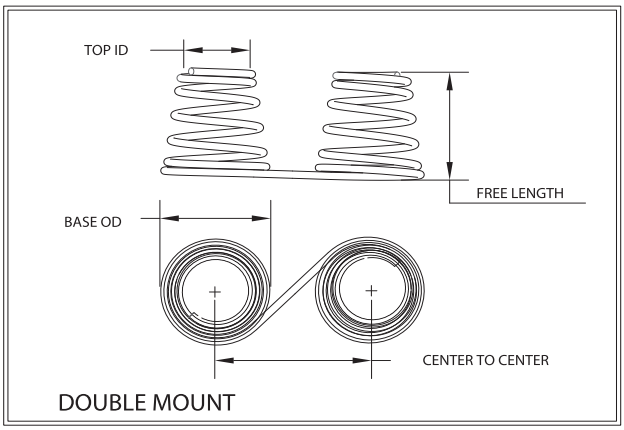

Materials:

- Nickel Plated Carbon Steel • Beryllium Copper
- Silver Plated Beryllium Copper • Phosphor Bronze
- Stainless Steel 17-7, 302, 304 and 316

Belleville washers, also known as Belleville Springs, are a type of non-flat washer. They have a slight conical shape which gives the washer a spring characteristic. Belleville washers are typically used as springs when the application requires a high load in a small space. They are also used to apply a pre-load or flexible quality to a bolted joint. They may also be used as locking devices, but only in applications with low dynamic loads, such as down-tube shifters for bicycles. Belleville washers are seen on Formula One racing cars, as they provide extremely detailed tuning ability.

Multiple Belleville washers may be stacked to modify the spring constant or amount of deflection. Stacking in the same direction will add the spring constant in parallel, creating a stiffer joint (with the same deflection). Stacking in an alternating direction is the same as adding springs in series, resulting in a lower spring constant and greater deflection. Mixing and matching directions allow a specific spring constant and deflection capacity to be designed.

Lee Spring Bends Over Backward – and Sideways and Any Way We Can – to Meet Your Wire Form Requirements.

Most springs have a helix or spiral shape consisting of a group of coils while wire forms normally do not. Wire Forms typically are parts made from wire that is bent to have specific angles and lengths. "Spring" is our last name but our extensive experience and comprehensive custom capabilities extend to Wire Forms, Stampings and Fourslide Parts.

Design Engineering

Lee Spring's World-Class Engineering Team will apply their expertise to assisting you with your Wire Form needs from conception and throughout the design and manufacturing process.

Prototyping

The cost of creating wire form prototypes has considerably decreased thanks to advances in CNC manufacturing technology. Lee Spring's Engineering Team will work with you to ensure that your wire form parts meet your spatial requirements. We can produce prototypes as part of our concurrent design process. Frequently, prototypes can be changed and produced in minutes, saving time and costly design errors.

Stress-Relieving

Wire forms often are stress-relieved during production. This helps ensure that a part's dimensions remain within required tolerances. Stress relieving streamlines the overall manufacturing process, lowers total production costs and helps ensure the component's reliability.

Material Shapes

Lee Spring produces custom wire forms manufactured to your exact specifications. We can produce wire forms out of almost any material shape, including:

- Rolled Round
- Flattened Round
- Rectangular
- Shaped

Dimensional Parameters

Wire Diameters:
.010" – .236" / .254 mm – 6 mm
Maximum Finished Length:
60.0"/ 1524 mm

Stampings – High Quality and High Value in Any Quantity.

Lee Spring is uniquely positioned to provide expert design and production capabilities for all stamping processes. Our experience with materials commonly used in mechanical springs makes us the smart choice for:

- **Product Design –** e.g., Beam Springs, Belleville Washers, Wave Washers, etc.
- **Stamping Process Design –** e.g., Tooling Design, Press Operations, SPC
- **Secondary Process Design –** e.g., Heat Treatment, Deburring, Plating, Passivation
- **Product Measurement and Testing –** e.g. Materials Testing, Load Testing

Customer Support and Manufacturing Capabilities

- CAD assisted Product Design (SolidWorks)
- Short Run and Prototype Production
- CAD assisted Tooling Design (CADKEY), including Progressive Dies
- In-House Tooling Production, including Wire EDM
- Automatic Stamping Presses up to 45 Tons
- In-House Secondary Operations including CNC Machining, Vibratory Deburring, Painting, Welding & Assembly
- Process Validation Procedures including 1st Articles and PPAP's
- Extensive Network of Approved Suppliers (Raw Materials, Special Processes and Production Components)

Materials

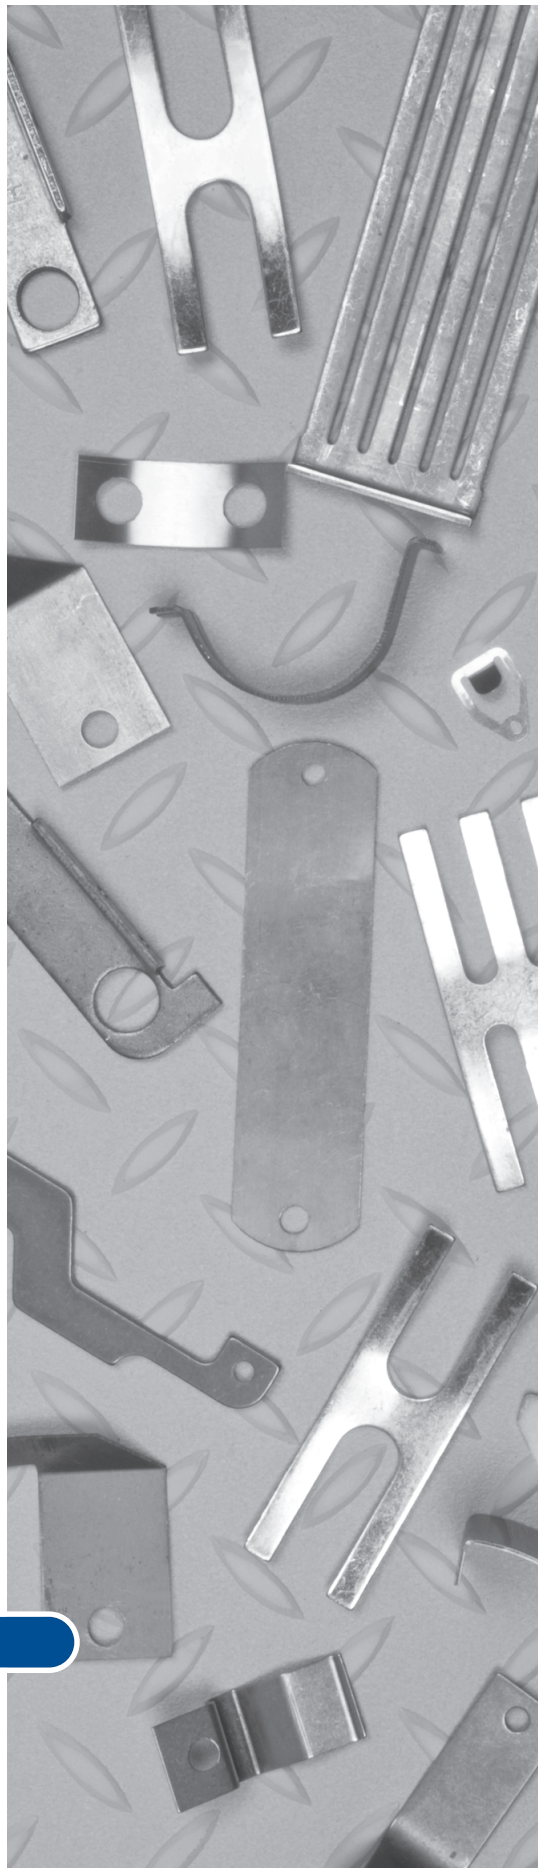

For springs or other applications, Lee Spring can provide stampings from a variety of both ferrous and non-ferrous metals, including:

- Low Carbon Steel, Annealed • Low Carbon Steel, Hard Drawn
- High Carbon Steel, Oil Tempered • Chrome Silicon, Oil Tempered
- Chrome Vanadium, Oil Tempered

- Beryllium Copper • Elgiloy®* • Hastelloy • Inconel 600, 718 & X750
- Phosphor Bronze • Brass

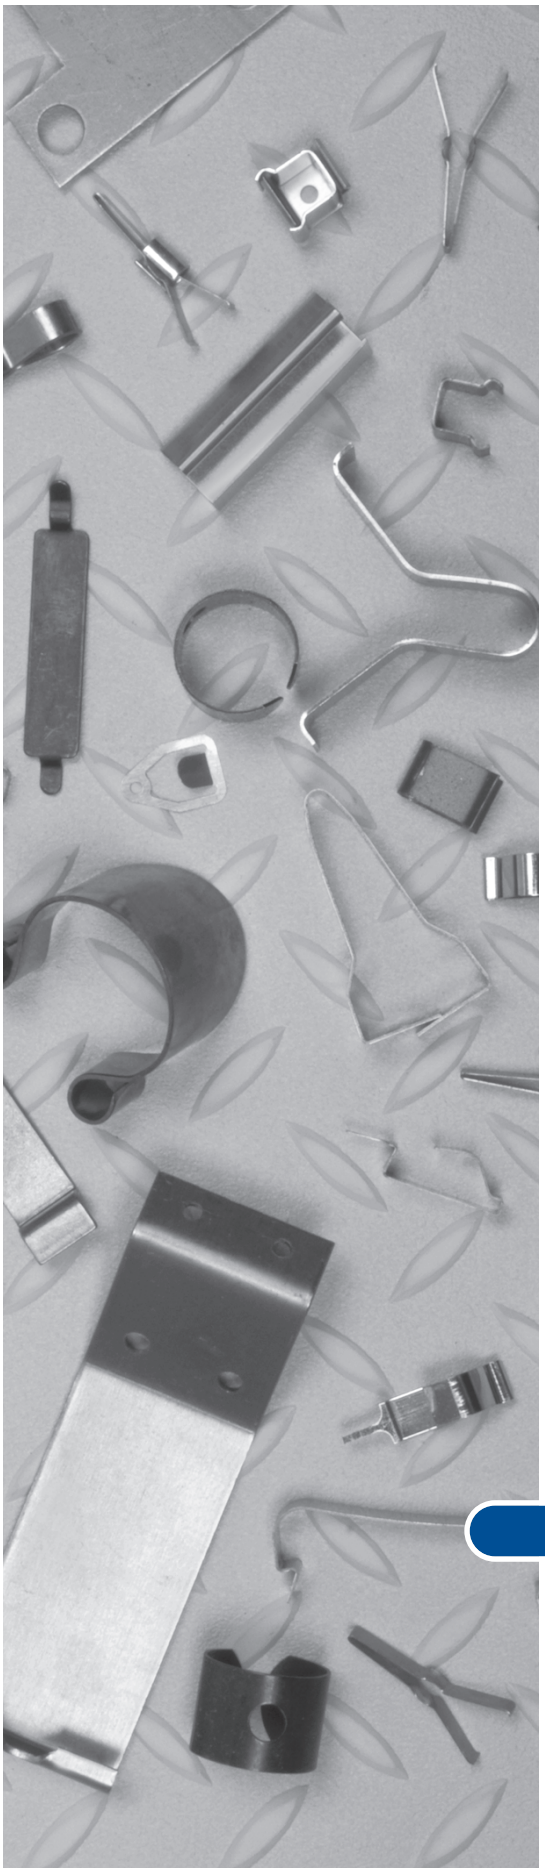

- Stainless Steel, Series 300
- Stainless Steel, Series 400
- Stainless Steel, Type 17-7

* Elgiloy is a trademark of Elgiloy Ltd. Partnership.

Dimensional Parameters

Strip Width:
up to 3" / 76.2 mm
Strip Thickness:
0.005" to 0.062" / .127mm -1.57 mm

Fourslide Parts – A Simple Solution to Complex Stampings.

Lee Spring can reduce part cost, accelerate product delivery, and streamline quality assurance with an integrated stamping and forming operation called fourslide. Fourslide production has low to moderate tooling costs and produces accurate repeatable parts. If you use flat springs, brackets, clips, flat terminals, or any stamped and formed metal components your parts may be natural candidates for fourslide. We can custom tool your intricate metal parts from flat strip material or from drawn or rolled wire.

What is a Fourslide Part?

A fourslide, also known as a four-slide, multislide, multi-slide, or four-way, is a metalworking machine tool used in the high-volume manufacture of small stamped components from strip or wire stock. The press is most simply described as a horizontal stamping press that uses cams to control tool motions. The machine is used as an alternative to progressive or transfer stamping operations.

What is the Fourslide Advantage?

The greatest advantage of the fourslide machine is its ability to complete all of the forming operations required to produce a part from start to finish economically. It can handle certain parts that transfer or progressive dies cannot, since it can manipulate from four axes. Because this process requires less machinery, setups, and handling, the cost of the finished part is reduced.

Lee Spring produces our own quality tooling, minimizing downtime. A fourslide machine can usually produce 1000 to over 4000 finished parts per hour, depending on the number of operations per part; this speed also will generally result in a lower cost per part.

Materials

The application of fourslides is usually limited by the material stock formability rather than the machine capabilities. Usually the formed characteristics and bending radii are the most limiting factors. The most commonly used materials are:

- Low-Carbon or High-Carbon Cold Rolled Steel
- Type 300 and 400 Stainless Spring Steels
- Copper Alloys including Beryllium-Copper
- Bronze Alloys, including Phosphor Bronze

Dimensional Parameters

Strip Width:
.010" - .500"/ .254 mm – 12.70 mm
Strip Thickness:
.003" - .125"/ .076 mm – 3.175 mm
Wire Diameter:
.005" - .187"/ .127 mm – 4.750 mm

Active Coils — those coils which are free to deflect under load.

Allow for Set — spring is supplied longer than specified to compensate for length loss when fully compressed in assembly by customer. Usually recommended for large quantity orders to reduce cost.

Angular Relationship of Ends — the relative position of the plane of the hooks or loops of extension springs to each other.

Blue — a thin blue film of oxide on ferrous alloys, sometimes used to indicate that the material has been stress relieved.

Baking — heating of electroplated springs to relieve hydrogen embrittlement.

Buckling — bowing or lateral deflection of compression springs when compressed, related to the slenderness ratio (L/D).

Closed Ends — ends of compression springs where pitch of the end coils is reduced so that the end coils touch.

Closed and Ground Ends — same as with closed ends, except that the end is ground to provide a flat plane.

Closed Length — see Solid Height.

Close-Wound — coiled with adjacent coils in contact.

Coils Per Inch — see Pitch.

Deflection Motion — of spring ends or arms under the application or removal of an external load.

Elastic Limit — maximum stress to which a material may be subjected without producing permanent set.

Endurance Limit — maximum stress at which any given material will operate indefinitely without failure for a given minimum stress.

Free Angle — angle between the arms of a torsion spring when the spring is not loaded.

Free Length — the overall length of a spring in the unloaded position.

Frequency (natural) — the lowest inherent rate of free vibration of a spring itself (usually in cycles per second) with ends restrained.

Gradient — see Rate.

Heat Setting — fixturing a spring at elevated temperature to minimize loss of load at operating temperature.

Helix — the spiral form (open or closed) of compression, extension and torsion springs.

Hooks — open loops or ends of extension springs.

Hot Pressing — see Heat Setting.

Hydrogen Embrittlement — hydrogen absorbed in electroplating or pickling of carbon steels, tending to make the spring material brittle and susceptible to cracking and failure, particularly under sustained loads.

Hysteresis — the mechanical energy loss that always occurs under cyclic loading and unloading of a spring, proportional to the area between the loading and unloading load-deflection curves within the elastic range to a spring.

Initial Tension — the force that keeps the coils of an extension spring closed and which must be overcome before the coils start to open.

Load — the force applied to a spring that causes a deflection.

Loops — coil-like wire shapes at the ends of extension springs that provide for attachment and force application.

Mean Coil Diameter — outside spring diameter minus one wire diameter.

Modulus in Shear or Torsion — coefficient of stiffness for extension and compression springs.

Modulus in Tension or Bending — coefficient of stiffness used for torsion and flat springs (Young's Modulus).

Moment — see Torque.

Open Ends, Not Ground — end of a compression spring with a constant pitch for each coil.

Open and Ground End — "open ends, not ground" followed by an end grinding operation.

Passivating — acid treatment of stainless steel to remove contaminants and improve corrosion resistance.

Permanent Set — a material that is deflected so far that its elastic properties have been exceeded and it does not return to its original condition upon release of load is said to have taken a "permanent set".

Pitch — the distance from center to center of the wire in adjacent active coils (recommended practice is to specify number of active coils rather than pitch).

Preset — see Remove Set.

Rate — change in load per unit deflection, generally given in pounds per inch.

Remove Set — full compression of a spring to solid state by manufacturer when needed to prevent length loss in operation.

Residual Stress — stresses induced by set removal, shot peening, cold working, forming or other means. These stresses may or may not be beneficial, depending on the application.

Set — length loss in operation due to the high stress condition of the spring.

Shot Peening — a cold working process in which the material surface is peened to induce compressive stresses and thereby improve fatigue life.

Slenderness Ratio — ratio of spring length to mean coil diameter.

Solid Height — height of a compression spring when under sufficient load to bring all coils into contact with adjacent coils.

Spring Index — ratio of the mean coil diameter to wire diameter

Squared and Ground Ends — see Closed and Ground Ends.

Squared Ends — see Closed Ends.

Stress Range — the difference in operating stresses at minimum and maximum loads.

Stress Relieve — to subject springs to low-temperature heat treatment so as to relieve residual stresses.

Squareness of Ends — angular deviation between the axis of a compression spring and a normal to the plane of the ends.

Squareness Under Load — same as in Squareness of Ends, except with the spring under load.

Torque — a twisting action in torsion springs which tends to produce rotation, equal to the load multiplied by the distance (or moment arm) from the load to the axis of the spring body. Usually expressed in inch-oz., inch-pounds or in foot-pounds.

Total Number of Coils — number of active coils plus the coils forming the ends.

Trapped Stress — see Residual Stress.

ROHS COMPLIANCE

RoHS 2 (European Directive 2011/65/EU on Restriction of the Use of Certain Hazardous Substances) is European legislation that restricts the levels of Lead, Mercury, Cadmium, Hexavalent Chromium, Polybrominated Biphenyls (PBB), Polybrominated Diphenyl Ethers (PBDE), Bis(2-ethylhexyl) Phthalate (DEHP), Butyl Benzyl Phthalate (BBP), Dibutyl Phthalate (DBP) and Diisobutyl Phthalate (DIBP) present in electrical and electronic equipment sold in the European Union. ***All Lee Spring Stock Products, with the exception of Cadmium Plated MIL-SPEC Springs,comply with the RoHS 2 Directive, including Directive (EU) 2015/863 and (EU) 2017/2102 amendments.***

REACH COMPLIANCE

REACH (Regulation on Registration, Evaluation, Authorization and Restriction of Chemicals) refers to European Union Regulation No 1907/2006. The aim of REACH is to ensure a high level of protection of human health and the environment from the risks that can be posed by chemicals. ***All Lee Spring Stock Products, with the exception of Cadmium Plated MIL-SPEC Springs, comply with this regulation.***

While the vast majority of Lee Spring Custom Products are also RoHS and REACH compliant, please note that certain specifications requested by our customers may not be compliant. Lee Spring only manufactures products that are not in compliance with these regulations upon customer request and can advise customers on RoHS or REACH compliance issues if there is any uncertainty.

DFARS COMPLIANCE

DFARS 252.225-7014, Alt.1 prohibits prime government contractors and all suppliers at every tier from incorporating "specialty metals" (as defined in the clause) into military parts, components and/or end item deliverables unless the specialty metals have been:

- melted in the United States
- its outlying areas, or
- a qualifying country listed in DFARS 225.872-1.

Articles manufactured in a qualifying country, regardless of where the specialty metal may have been melted, are not subject to the requirement.

Based on the definition of "specialty metals", as given in DFARS 252.225-7014, Music Wire Hard Drawn MB, and Oil Tempered MB spring wire are excluded from this requirement. However, Stainless Steel 301, Stainless Steel 302, Stainless Steel 316, Stainless Steel 17-7, and Oil Tempered Chrome Silicon are considered "specialty metals" (are not excluded) and therefore may be restricted for use under DFARS 252.225-7014.

Not all of the wire used by Lee Spring in the manufacture of our products is melted in the United States or in any of the other qualifying countries. Should the products you need fall under the DFARS 252.225-7014 requirement, you will need to contact Lee Spring Customer Service or Engineering so that your requirement can be processed as a custom transaction. This may involve an increase in price, lead time, or both, on a case by case basis, depending on the availability of a suitable supply of the restricted alloy required.

MS (MATERIAL TRACEABILITY)

All Stock Spring products are available with Material Traceability certification; these products should be designated with the suffix MS. There is a documentation surcharge included in the price. Please contact Lee Spring for pricing.

All Custom Spring products are available with Material Traceability certification. Please be sure to specify your requirement for these documents when placing a custom order.

EXPORT REGULATIONS

All Lee Spring Stock products are exempt from and therefore compliant with the International Traffic in Arms Regulation (ITAR) (22 CFR 120-130). *Note that any customer required modifications to form, fit or function specifically for a military application would preclude such exemption.*

MIL-SPEC SPRINGS

Lee Spring now stocks the complete line of products meeting Military Standards Compression Springs (AS24585) and Extension Springs (AS24586) as detailed on page 329. Material Traceability certification is included with MIL-SPEC Spring orders. DFARS material compliance is also included for stainless steel MIL-SPEC Springs.

Global Flexibility

An expanding global presence and an in-depth knowledge of the worldwide marketplace puts Lee Spring at the leading edge of creating market-specific solutions.

With steady focus and attention to detail, Lee Spring partners with your business to find solutions that meet your geographic requirements wherever your business takes you in the world.

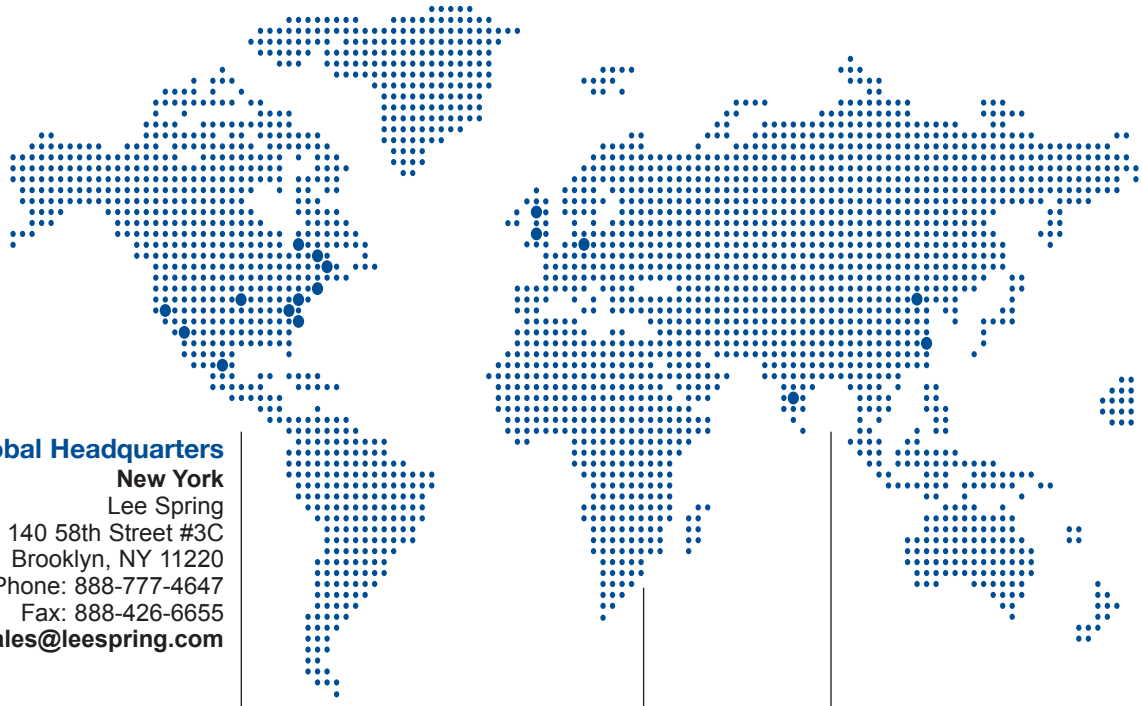

Serving Industries Worldwide

Lee Spring is your global source for stock springs, custom springs, and wire products for international industries including:

- Aerospace
- Computer and Telecommunications
- Defense
- Industrial and Manufacturing Equipment
- Instrumentation and Controls
- Medical, Dental and Veterinary Devices
- Pharmaceutical Delivery Systems
- Robotics and Automations
- Sporting Goods and Toys
- Stampings and Machining
- Tools and Hardware
- Transportation
- Valves and Pumps

and more…

Free Standard Ground Shipping

on all stock spring orders of $40 or more in the Continental United States.

Ordering is Easy

Call: 888-777-4647 (888-SPRINGS)
Visit: leespring.com
Email: sales@leespring.com
Fax: 888-426-6655

Convenient Payment Methods

Order using your Lee Spring account or Credit Card.

VISA MasterCard AMERICAN EXPRESS

Free Shipping!

Lee Spring offers free standard ground shipping on all stock spring orders of $40 or more within the Continental United States.

Need Parts Fast?

Lee Spring offers expedited services to get you the springs you need when and where you want them. Lee Spring stocks a huge inventory of springs in stock and ready to ship.

Need a Quote?

Lee Spring can provide a stock or custom quote on the parts you need. Get up to the minute inventory information on all stock parts with just one call. Lee Spring pricing is available online 24/7 for quantities up to 1,000 pieces. For higher quantity, contact Lee Spring by calling 888-777-4647, email sales@leespring.com or fax 888-426-6655.

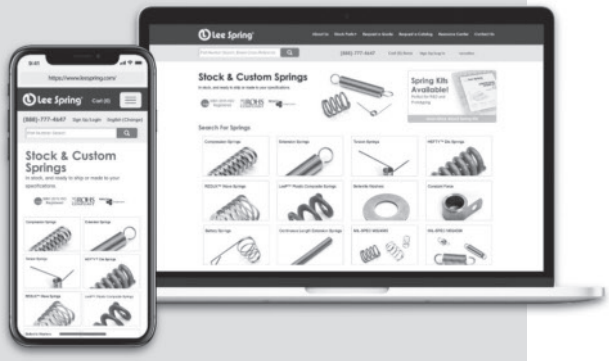

Need Engineering or Technical Support?

Work directly with an experienced Lee Spring Engineer from design through production. Lee Spring has been manufacturing springs since 1918 and we offer the highest quality technical support in the industry. Call us at 888-777-4647 or email us at sales@leespring.com

Convenient Online Ordering!

- ✔ Quickly Order Parts
- ✔ Find Pricing
